# Our history

The brand PUK represents an independent private enterprise, run in the best tradition of the German medium-sized businesses.

PUK-WERKE was formally founded in 1969. Our history, however, goes way back to the 30ies of the last century. Today, we may look back on 70 years of successful company history.

The Berlin-based businesses Herman Pohl OHG (general partnership, founded in 1951), and the Anton Klein OHG, (founded in 1935), whose shareholders decided in 1969 to bundle

their business activities in the PUK-WERKE KG (limited partnership), form the roots of our company.

The merge of those two companies set the course for a positive future. Synergies could be utilized, enabling the enterprise to work the German market with greater intensity. At the same time, this step laid the foundations for an efficient internationalization of our business relations.

Both founding companies began their success story with the production of cable clamps – known until this day as “Pohl-clamps” or “KSV-clamps”.

The development and production of cable support systems was soon to follow, developing into our today's complete and innovative product portfolio, complemented by under floor systems with new, patented solutions, as well as assembly systems for photovoltaic systems.

Our expertise in the installation of PV mounting systems are sourced from the long-time experience of our Spanish subsidiary PUK-Portacables and continue together with PUK Solar the success story.

# Our group of companies

i

We supply cable support systems, cable clamps, under floor systems and assembly systems for photovoltaic systems directly to you; furthermore we will mount our products for you on your construction sites both, nationwide and abroad.

Consequentially, we see ourselves as a service provider for whom customer orientation, service and flexibility are number one priority. Your contact person is always nearby in our 10 branches all over Germany.

in addition we have our own distribution companies or distribution partners in many European countries; thanks to our subsidiary P&K ENERGO, we can offer you our products even in Moscow in stock.

With our Polish subsidiary EL-PUK and PUK-România we not only have our own production site for the East European market but are also able to offer you assembly on site at regional conditions.

TEKOM-PUK is the leading producer of cable support systems in Turkey. Together with PUK-Middle East new possibilities will be opened not only in Turkey but also in its adjacent states and in the Arabic region.

In Western Europe, PUK Portacables is your partner on the spanish and portuguese market, PUK Schweiz on the swiss market, PUK Benelux in The Netherlands and Belgium, as well as PUK UK in the United Kingdom and Ireland.

In the fiscal year of 2015, the PUK Group generated a turnover of about 140 million Euros with around 770 employees – 415 of them work in Germany.

# Our comprehensive offer

## Consulting

Our field staff and sales force consists of skilled specialists with high-level expert knowledge and many years of experience.

They are always happy to answer your questions regarding cable support systems, cable clamps, underfloor systems and photovoltaic systems.

If you wish, our experts will develop technical solutions for you and optimize your project together with you under consideration of costs.

If you chose to mount our products on your construction site, our local staff will help you all the way - from the right

choice of products to the mounting technology.

## Planning

Our technical department engineers in our Berlin headquarters are at our customers' disposal. During international large-scale projects, they work in close cooperation with the responsible planning and engineering offices Germany-wide and abroad.

Our engineers develop detailed recommendations for special applications, provide engineering drawings, static verifications and compile installation-typicals for complex situations to ensure a smooth mounting of our products.

## Installation

Our competence in installation is being proven on nearly 1.000 construction sites per year.

The PUK branch offices provide flexible and customer-oriented support for small and medium-sized projects. Our experienced construction supervisors are located directly in our branch offices to make sure that your competent contact person is always close by during the completion of your project.

If you are planning a challenging and

complex major project in Germany or abroad, our main installation department in the Berlin headquarters will be by your side.

The construction of a power plant, a tunnel or an airport often times requires the timely delivery and installation of more than 100 kilometres of cable trays. Therefore, our construction supervisors are always on site.

Our SCC-certification meets high requirements regarding security, health and environment protection (according to SGU) on our construction sites.

### Production and logistics

In Germany, we manufacture in two modern plants in Berlin and Schoenbeck (Eifel) on a shop floor of more than 30.000 square metres.

Our high capacity and flexible production lines process more than 20.000 tons of steel each year into cable support parts, underfloor components and photovoltaic constructions.

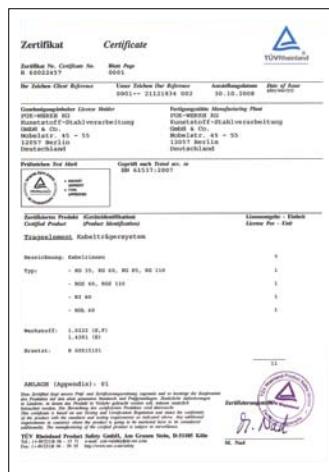

Our own galvanizing plants are an essential factor for being able to guarantee our quality and flexibility.

Our broad experience has taught us how important it is for the completion of every individual project to have a reliable material availability, even on short-notice.

Therefore, our PUK storehouses in all regions are at your disposal offering an extensive assortment of products. With the storehouses at our production facilities plus other nine storehouses throughout Germany, we can guarantee shortest delivery times, no matter where you are, and – if you have commissioned us with the assembly as well – the capability for a proximate assembly start.

# Quality and safety

We ensure the quality of our products and the application security by constant inspection and certification, as well as by supplementing the legal test procedures by additional, specially developed quality assurance. Specific instructions regarding work, procedures and inspection are an inherent part of our quality management.

Our plants and branch offices have been certified according to DIN EN ISO 9001. This certification applies to the construction, manufacture and mounting of PUK cable support systems.

In co-operation with the TÜV Rheinland (Technical Inspection Agency), we test our cable support systems on our own test stand according to the strict DIN EN 61537 guidelines and with a special focus on the bearing capacities and thus application security.

Our underfloor systems comply with DIN EN 50085 and DIN VDE 0634.

PUK Solar's mounting systems were tested and certified according to the TÜV specification TZE/2.572.11.

The corresponding specifications in our catalogues bear the „TÜV Rheinland - construction type tested“ label as well as the VDE label.

Our SCC-certification meets high requirements regarding security, health and environment protection (according to SGU) on our construction sites.

# Our product portfolio

## Cable trays

A time-tested complete solution, consisting of:

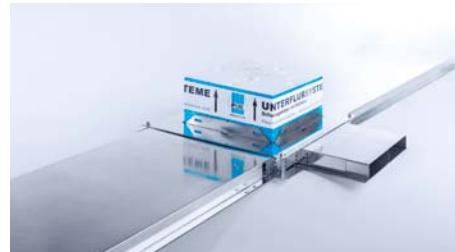

- wire mesh cable trays
- cable trays
- cable ladders
- wide-span systems
- supporting elements

Proven and tested system solutions consisting of serial parts. Cost-efficient due to serial production on state-of-the-art production facilities.

## Cable clamps

The thoroughly tried and tested solution for the rational and safe mounting of one, two or three cables with a diameter of up to 175 mm. For mounting to channels of various dimensions, to sectional steel, or directly to the wall. Made of hot-dip galvanized steel, corrosion-resistant and non-magnetic high-grade steel or of aluminium.

## Underfloor systems

Complete solutions for all types of use, consisting of:

- screed flush duct systems
- system components for double and cavity floors
- screed covered duct systems
- device cup and installation devices made of hot-dip galvanized steel, high-grade steel and synthetic material.

## Industry

A specially developed product range for industrial plants with the highest safety standards, consisting of:

- wide-span cable systems
- ship ladders
- supporting systems
- PUK STRUT

## PUK Solar

The mounting system for photovoltaic system underframes is based on the use of various standard mounting profiles. The simplicity of the coaction of the profiles to the module clamps, the functionality as well as the flexible utilization are the prerequisites for the easily distinguishable user-friendly mountability of our system. Based on set parameters we offer solutions for the assembly of photovoltaic systems that are statically funded, yet at the same time unbeatably priced.

Of course, we offer our cable trays, underfloor systems, as well as mounting structures for photovoltaic systems with optional assembly!

# Cable trays

## RGS 60 cable tray, heavy, perforated, height=60 mm

Only cable trays up to 300 mm wide are permissible for systems of function maintenance in fire protection as standard support structures according to DIN 4102-12. This article is also available made in stainless steel finish, material No. 1.4571 / 1.4404 (V4A).

For a load diagram, see the chapter planning.

For an application example, see the chapter assembly.

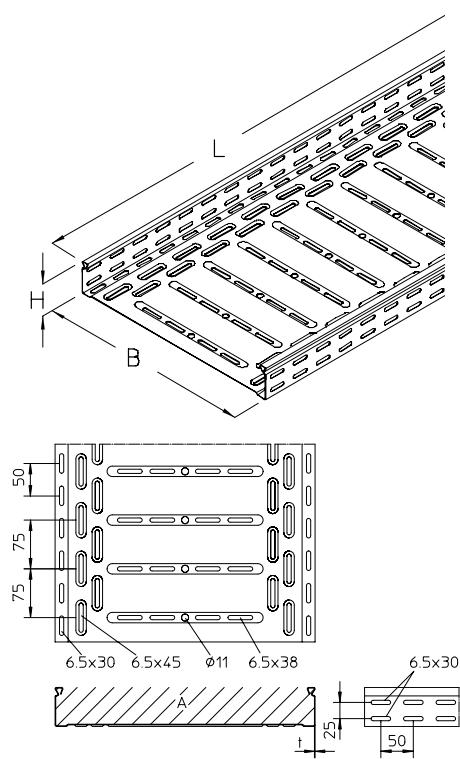

For assembly instructions, see the chapter assembly.

### WPV 120 wide-span coupler, height=120 mm

In order to compensate for the heat expansion one side of the connector is mounted as a loose bearing. The given torques must be observed. The other side of the connector is to be mounted as a fixed bearing. A minimum distance of 4mm must be kept between the cable ladders. This article is also available made in stainless steel finish, material No. 1.4571 / 1.4404 (V4A).

For an application example, see the chapter assembly.

### KDU 40 bracket support, 40x30mm

Ceiling bracket support, U-profile 40 x 30mm, continuously three-way perforated, with welded head plate, certified according to DIN EN 61537.

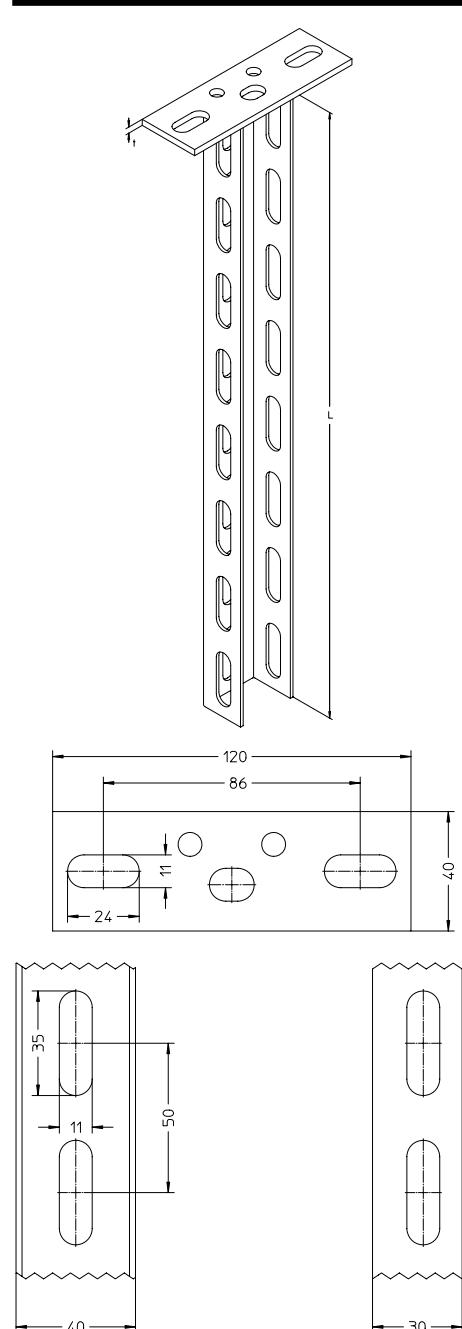

Load figures  $P_{max}$  when using a support piece with the hot-dip galvanized Bracket support according to DIN EN 61537 (test No. 10.8.2.3). It is recommended to apply the support piece from a bracket width of 400mm or if the bracket is installed at the end of the ceiling fixed bracket.

For assembly instructions, see the chapter assembly.

## KHU-system

### KDU 40 bracket support, 40x30mm

Ceiling bracket support, U-profile 40 x 30mm, continuously three-way perforated, with welded head plate, certified according to DIN EN 61537.

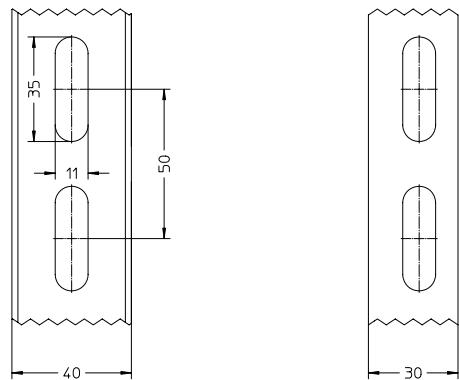

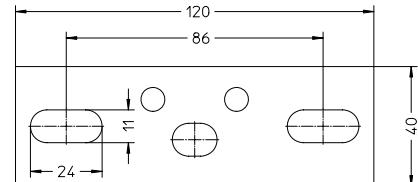

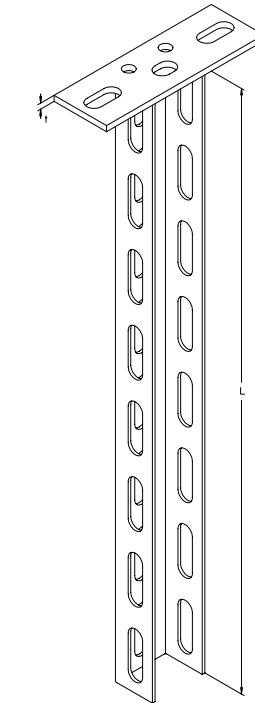

Load figures  $P_{max}$ , when using a support piece with the hot-dip galvanized Bracket support according to DIN EN 61537 (test No. 10.8.2.3). It is recommended to apply the support piece from a bracket width of 400mm or if the bracket is installed at the end of the ceiling fixed bracket.

For assembly instructions, see the chapter assembly.

## KHU-system

### KDU 60 bracket support, heavy, 60x40 mm

$F_d/P$ : coefficient for calculation of the dowel load  $F_d$  with effective bracket load  $P$  respectively the sum of effective bracket loads. This article is also available made in stainless steel finish, material No. 1.4571 / 1.4404 (V4A).

For an application example, see the chapter assembly.

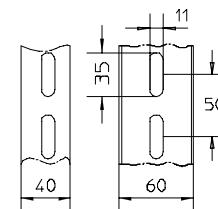

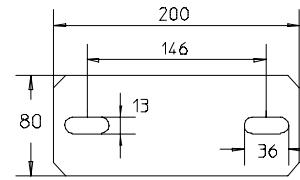

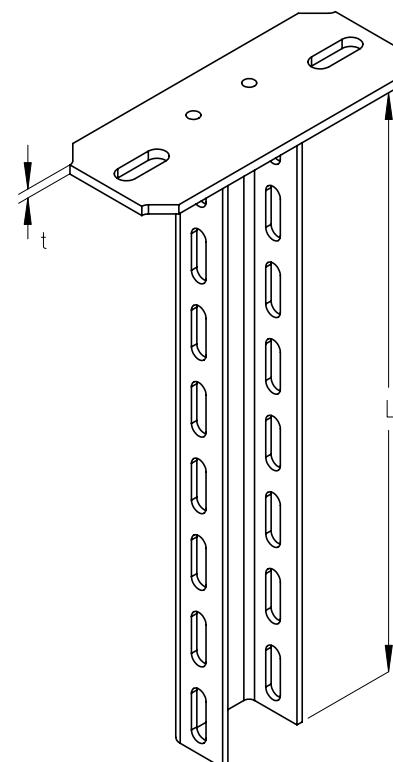

For assembly instructions, see the chapter assembly.

# Support systems

## KHU-system

### KHU 40 bracket support, 40x30mm

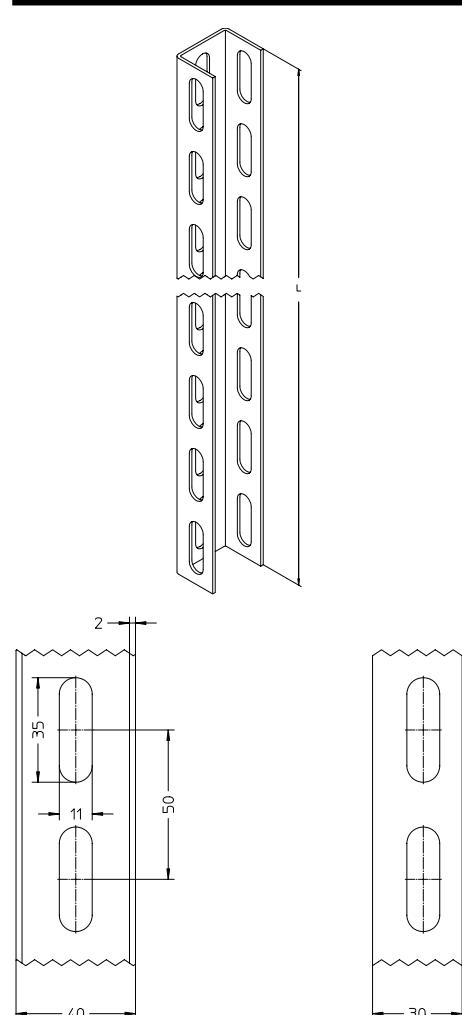

Ceiling bracket support, U-profile 40 x 30mm, continuously three-way perforated.  
It is recommended to apply the support piece from a bracket width of 400mm or if the bracket is installed at the end of the ceiling fixed bracket.  
For assembly instructions, see the chapter assembly.

## KHA-system

### BGA 41 Mounting/ floor/ ceiling plate

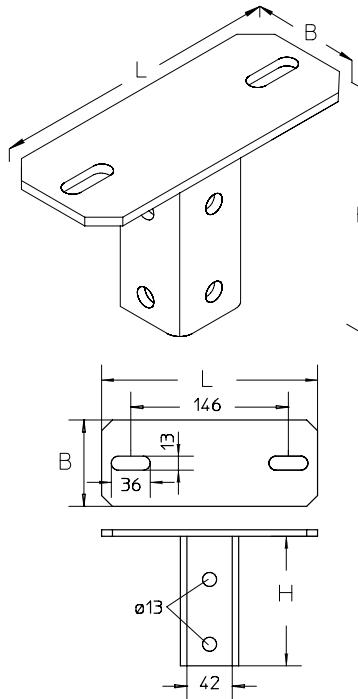

For an application example, see the chapter assembly.  
For assembly instructions, see the chapter assembly.

| article number             | H<br>mm | B<br>mm | L<br>mm | G<br>kg |
|----------------------------|---------|---------|---------|---------|
| <b>F</b><br><b>BGA 41F</b> | 120     | 80      | 200     | 1,20    |

accessories optional:

- SD** expansion anchor (page G12)
- SKL M** beam clamp set (page G06)
- SES** hexagon head bolt, DIN 933 (page G37)
- AMF22** channel spring nut, A41 (page G43)
- AM22** channel nut, A41/ KHA 41/ KHAL 41 (page G43)

### BGA 41/2 head plate, profile 41

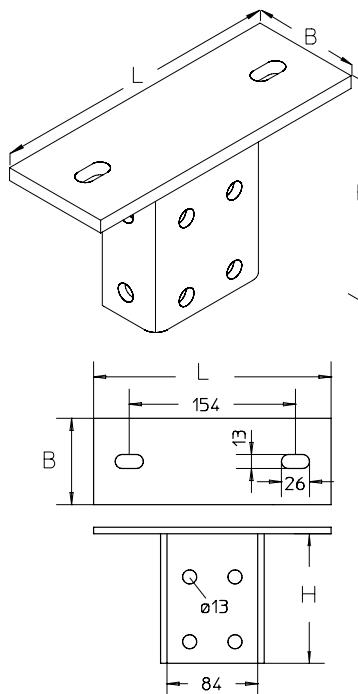

For an application example, see the chapter assembly.

| article number               | H<br>mm | B<br>mm | L<br>mm | G<br>kg |
|------------------------------|---------|---------|---------|---------|
| <b>F</b><br><b>BGA 41/2F</b> | 120     | 80      | 220     | 1,80    |

accessories optional:

- SD** expansion anchor (page G12)
- SKL M** beam clamp set (page G06)
- SES** hexagon head bolt, DIN 933 (page G37)
- AMF22** channel spring nut, A41 (page G43)
- AM22** channel nut, A41/ KHA 41/ KHAL 41 (page G43)

## KHA-system

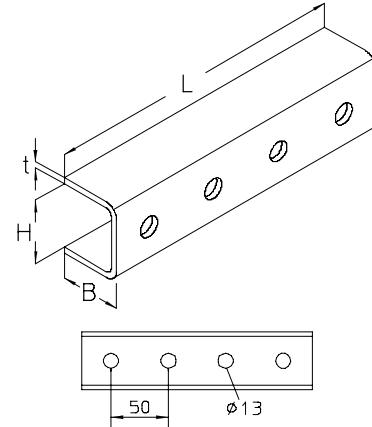

### AV coupler for KHA-profile

For an application example, see the chapter assembly.

| article number     | H<br>mm | B<br>mm | L<br>mm | t<br>mm | G<br>kg |
|--------------------|---------|---------|---------|---------|---------|
| F<br><b>AV 41F</b> | 42      | 40      | 200     | 4       | 0,70    |

accessories optional:

- AMF22** channel spring nut, A41 (page G43)
- AM22** channel nut, A41/ KHA 41/ KHAL 41 (page G43)
- US 125** square washer, DIN 125 (page G39)
- IK** hexagon socket head screw, DIN 912 (page G36)
- SEM** hexagon-nut, DIN 934 (page G41)

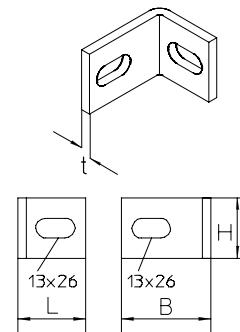

### BL 5 corner angle

| article number    | H<br>mm | B<br>mm | L<br>mm | t<br>mm | G<br>kg |
|-------------------|---------|---------|---------|---------|---------|
| F<br><b>BL 5F</b> | 40      | 45      | 60      | 6       | 0,20    |

accessories optional:

- SD** expansion anchor (page G12)
- SES** hexagon head bolt, DIN 933 (page G37)
- AM22** channel nut, A41/ KHA 41/ KHAL 41 (page G43)
- AMF22** channel spring nut, A41 (page G43)
- HS18** tee-head bolt, A7/ A8/ A9 (page G45)
- AMF18** channel spring nut, A7/ A8 (page G45)
- AM18** channel nut, A7/ A8 (page G44)

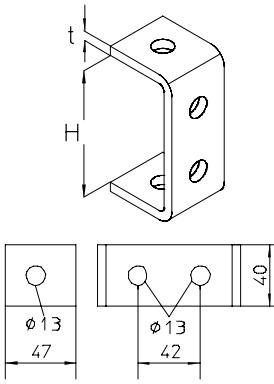

### AKL rail clamp

For an application example, see the chapter assembly.

| article number      | H<br>mm | t<br>mm | G<br>kg |
|---------------------|---------|---------|---------|
| F<br><b>AKL 41F</b> | 84      | 6       | 0,30    |

accessories optional:

- SES** hexagon head bolt, DIN 933 (page G37)
- AM22** channel nut, A41/ KHA 41/ KHAL 41 (page G43)
- AMF22** channel spring nut, A41 (page G43)

# Support systems

## KHA-system

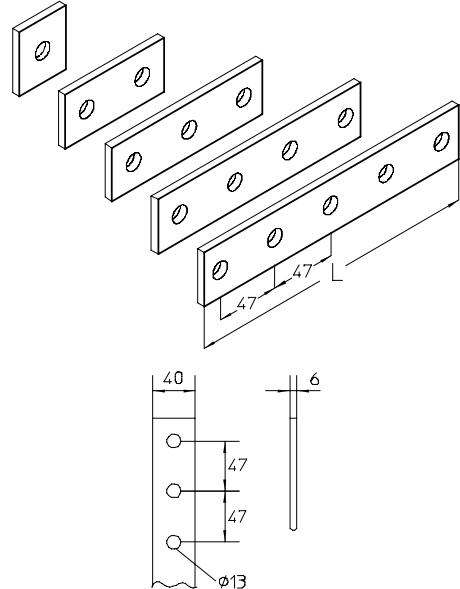

### AVL fastening strip

For an application example, see the chapter assembly.

| article number | B<br>mm | L<br>mm | t<br>mm | G<br>kg |
|----------------|---------|---------|---------|---------|
| <b>F</b>       |         |         |         |         |
| <b>AVL-1F</b>  | 40      | 42      | 6       | 0,07    |
| <b>AVL-2F</b>  | 40      | 89      | 6       | 0,16    |
| <b>AVL-3F</b>  | 40      | 136     | 6       | 0,24    |
| <b>AVL-4F</b>  | 40      | 183     | 6       | 0,32    |
| <b>AVL-5F</b>  | 40      | 230     | 6       | 0,40    |

accessories optional:

- SES** hexagon head bolt, DIN 933 (page G37)  
**AM22** channel nut, A41/ KHA 41/ KHAL 41 (page G43)  
**AMF22** channel spring nut, A41 (page G43)

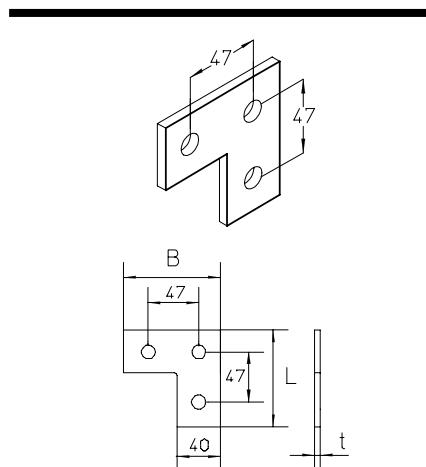

### AVE corner connector 90°

For an application example, see the chapter assembly.

| article number | B<br>mm | L<br>mm | t<br>mm | G<br>kg |
|----------------|---------|---------|---------|---------|
| <b>F</b>       |         |         |         |         |
| <b>AVE F</b>   | 90      | 90      | 6       | 0,27    |

accessories optional:

- SES** hexagon head bolt, DIN 933 (page G37)  
**AM22** channel nut, A41/ KHA 41/ KHAL 41 (page G43)  
**AMF22** channel spring nut, A41 (page G43)

# Support systems

## KHA-system

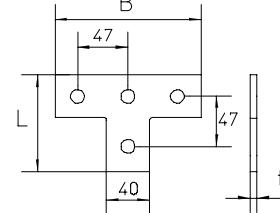

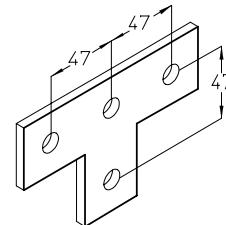

### AVA corner connector T-piece

For an application example, see the chapter assembly.

| article number    | B<br>mm | L<br>mm | t<br>mm | G<br>kg |
|-------------------|---------|---------|---------|---------|
| F<br><b>AVA F</b> | 136     | 90      | 6       | 0,36    |

accessories optional:

- SES** hexagon head bolt, DIN 933 (page G37)  
**AM22** channel nut, A41/ KHA 41/ KHAL 41 (page G43)  
**AMF22** channel spring nut, A41 (page G43)

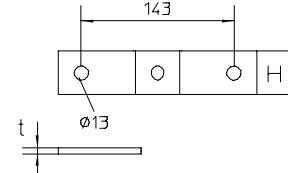

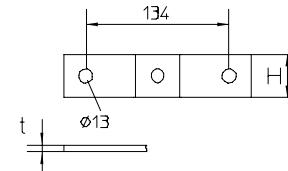

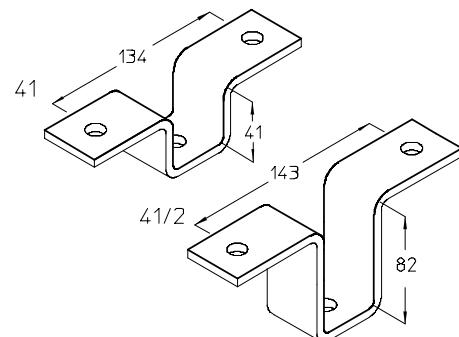

### AVB rail coupler U support

For an application example, see the chapter assembly.

| article number      | H<br>mm | t<br>mm | G<br>kg |

## Fastenings

### A

**AKB** channel bolt, A7/ A8/ A9 G47  
**AM12** channel nut, B3/ B6 G46  
**AM16** channel nut, B7 G45  
**AM18** channel nut, A7/ A8 G44  
**AM22** channel nut, A41/ KHA 41/ KHAL 41 G43  
**AMA18** channel nut, A7/ A8 G44  
**AMF18** channel spring nut, A7/ A8 G45  
**AMF22** channel spring nut, A41 G43  
**AN** support G11

### B

**BFS K** quick-mounting clip for all-round cable holder, plastic G50  
**BFS ND K** quick-mounting clip for all-round cable holder, plastic with nail plug G50

### D

**DAS** wire eyebolt G17

### F

**FKS** slotted cylinder head screw, DIN 84 G35  
**FR** spring ring G39  
**FRS** round-head screw with square, DIN 603 G35  
**FRSV** round-head screw with short square G34  
**FS** serrated lock washer G39

### G

**GB** threaded rod, DIN 976-1 G16  
**GCB** beam clip G31  
**GRIPADAP** thread adaptor with hole G30  
**GRIPCLE 1** adjustment key G32  
**GRIPCLE 2** adjustment key G32  
**GRIPM** pigtail anchor bolt G31  
**GRIPPING** wire cutter G32  
**GRIPTRAP** trapezium lock G30  
**GRIPTRAPP** trapezium lock plus G31  
**GRIPTWIS** wire end cap G32

### H

**HFEC 3** wire suspension with hook and universal closure G18  
**HFECEXP 1** wire suspension with hook and express closure G18  
**HFECEXP 2** wire suspension with hook and express closure G18  
**HFEF10 3** wire suspension with threaded end M10 and universal closure G21  
**HFEF10 4** wire suspension with threaded end M10 and universal closure G21  
**HFEF10EXP 2** wire suspension with threaded end M10 and express closure G20  
**HFEF6 2** wire suspension with threaded end M6 and universal closure G19  
**HFEF6 3** wire suspension with threaded end M6 and universal closure G19

**KNK** chain G17  
**KNK-NG** chain, emergency link G17  
**KOT K** coupling piece, plastic G50  
**KSD** plastic plug-in dowel G51

### L

**LK K** cable holder, plastic G49  
**LK ND K** cable holder, plastic with moulded-in nail plug G50

### M

**MKD** beam clamp G09

### R

**RGW** reducing bolt G11  
**RUS 41** stabilization plate, KHA profiles G41  
**RUS 50** mounting plate, KHA profiles G42

### S

**SA** anchor G13  
**SA-D** anchor G13  
**SAZ** anchor G12  
**SAZ-B** Ferro-concrete drill G12  
**SAZ-D** anchor G13  
**SD** expansion anchor G12  
**SD-BS** straddling dowel, fire protection G51  
**SEH** hexagon wood screw G38

**SEM** hexagon-nut, DIN 934 G41  
**SEMS** hexagon nut, self-locking, DIN 6923 G41  
**SEMSS** hexagon-nut, self-locking, DIN 985 G42  
**SES** hexagon head bolt, DIN 933 G37  
**SH K** multiple cable holder, plastic G48  
**SH ND K** multiple cable holder, plastic with nail plug G48  
**SH QS** multiple cable holder, metal G48  
**SHH** eyebolt G18  
**SHK K** cable holder, plastic G49  
**SHK ND K** cable holder, plastic with nail plug G49  
**SHS** eyebolt G17  
**SK** clamping claw G10  
**SKL A** beam clamp set G07  
**SKL M** beam clamp set G06  
**SKS A** beam clamp set G04  
**SKS H** beam clamp set G03  
**SKS M** beam clamp set G05  
**SN** screw nail anchor G51  
**SN G** beam clamp G10  
**SPRINGCLIP** spring clip G31  
**SSK** protection end cap G42

### T

**TBS** trapezium bow G16  
**TIGERCLIP** Tiger clip G31  
**TPZPEC 2** wire suspension with hook and trapezium closure plus G26  
**TPZPEC 3** wire suspension with hook and trapezium closure plus G26  
**TPZPEF10 2** wire suspension with threaded end M10 and trapezium closure plus G27  
**TPZPEF10 3** wire suspension with threaded end M10 and trapezium closure plus G27  
**TPZPEF10 4** wire suspension with threaded end M10 and trapezium closure plus G27  
**TPZPEF8 2** wire suspension with threaded end M8 and trapezium closure plus G26  
**TPZPEF8 3** wire suspension with threaded end M8 and trapezium closure plus G27  
**TPZPFR 2** wire suspension with loop and trapezium closure plus G28  
**TPZPFR 3** wire suspension with loop and trapezium closure plus G28  
**TPZPFR 4** wire suspension with loop and trapezium closure plus G28  
**TPZPSP 2** wire suspension with cross anchor and trapezium closure plus G28  
**TPZPSP 3** wire suspension with cross anchor and trapezium closure plus G29  
**TPZPTH 2** wire suspension with trapezium sheet metal hook and trapezium closure plus G29

### U

**US 125** square washer, DIN 125 G39  
**US 9021** square washer, DIN 9021 G40  
**UVS** captive washer G40

### V

**VA-AP** shear connector rod, pistol G14  
**VAB-HB** shear connector rod, concrete G14  
**VAB-HB B** shear connector rod, brush G14  
**VAB-HB M** shear connector mortar G14  
**VAS-AS** shear connector rod, stone G15  
**VAS-BS** shear connector rod, fire protection G15  
**VAS-M** shear connector mortar G15  
**VAS-SH** perforated bush for shear connector, stone G15  
**VM** rod coupling G16

### Y

**YAJCT 2** Y-Fit accessory with hook for cable trays G30  
**YAJEC 1** Y-Fit accessory with hook G29  
**YAJEC 2** Y-Fit accessory with hook G29  
**YAJEC 3** Y-Fit accessory with hook G30

The technical information is provided to

- inform you about protective measures against corrosion
- help you finding the suitable products for your application
- inform you about available, castum-made products.

In order to make the use of this catalogue easier for you we use tokens and symbols. You find the explanations on the inner pocket of the back side page. If you should have any technical questions or requests about available non-standard products we are glad to help you from our headquarters in Berlin or our branch offices at any time.

Subject to technical modifications.

### Corrosion prevention

Prior to choosing materials for the passing of cables it is recommended to take a look at the corrosive environmental conditions at the construction site and to determine the corrosion prevention accordingly.

For installations in regular environment, zinc coatings have proven to be protective for steel against corrosion. However, the protective zinc coat is being reduced by various climatic influences throughout the years. The following table shows the loss of coating per year:

### Environmental influence and corrosion risk

| Corrosion-category            | Loss of thickness µm/year | Typical environment   |   |
|-------------------------------|---------------------------|---|---|
|                               |                           | outdoors  | indoors   |
| C1 inconsiderable             | ≥ 0.1                     | -   | Heated buildings like offices, stores, schools, hotels                |
| C2 slight                     | > 0.1 until 0.7           | Little pollution, like rural areas                                  | Not heated buildings with formation of condensate like store houses   |
| C3 moderate                   | > 0.7 until 2.1           | City and industrial environments with moderate pollution            | Production plants with high humidity, like laundry, brewery and dairy |
| C4 strong                     | > 2.1 until 4.2           | Industrial areas and coastlines with moderate salt impact           | Chemical plants, swimming pools                                       |
| C5-I very strong (industrial) | > 4.2 until 8.2           | Industrial environment with high humidity and aggressive atmosphere | Buildings or areas with almost permanent condensation and pollution   |
| C5-M very strong (ocean)      | > 4.2 until 8.2           | Coastlines and offshore areas with high salt impact                 | Buildings or areas with almost permanent condensation and pollution   |

(Source: EN ISO 12944-2)

The loss of thickness per year multiplied with the expected life span of the construction determines the necessary thickness of zinc coating. There are mainly three zinc coatings that differ in thickness of coating, adhesive strength and appearance.

### Galvanic zinc (EN ISO 4042)

The small parts are zinced by means of electrolysis bath in which the zinc ions apply very evenly to the metal. The zinc coat is app. 5 µm thick, light glossy, and has an additional protection by succeeding bi chromium conditioning against abrasion.

Nuts and bolts (without further marking) in the catalogue are galvanic zinc coated **GV**. They are used for connecting Sendzimir zinc coated construction elements.

### Hot galvanized according to the Sendzimir procedure (EN 10346)

The steel strapping (thickness up to 2 mm) is coated in the steel-mill with zinc (flow path procedure). The result is an evenly spread and highly adhesive zinc coat with an average thickness of 19 µm.

Damage to the zinc coat caused by cutting, punching or drilling does not result in progressing corrosion because the neighbouring zinc is dissolving under the impact of (air-) humidity and builds a protective, brown coating layer of zinc hydroxide over the blanc metal. The „migration“ of zinc ions protects free areas up until app. 2 mm width. These articles are marked with the symbol **S**.

### Hot dip galvanized (EN ISO 1461)

The parts are hot dip galvanized after processing in liquid zinc (app. 450 C). Chemical reactions lead to various zinc-iron alloys, which are especially firmly connected to the steel core. These alloys are usually coated with a „pure zinc layer“. Depending on the speed of the reaction, steel composition, time of dipping, cooling process etc., a „growing through“ to the surface of the zinc-iron alloy is possible as well.

Therefore the appearance of the surface varies from dull dark grey to light glossy. This is no indication of thickness of zinc coating or quality of corrosion prevention. Humid environment can also cause a forming of zinc-hydroxide-carbonate (so called white rust). This does not influence the efficiency of the corrosion prevention. Cutting edges need to be protected with cold zinc paint (see catalogue chapter A).

According to EN ISO 1461 the average local thickness of the coating is at least

- 45 µm for material thicknesses up to 1.5 mm
- 55 µm for material thicknesses from 1.5 up to 3 mm
- 70 µm for material thicknesses from 3 up to 6 mm

The EN ISO 1461 complies basically with

BS EN ISO 1461 in Great Britain

EN ISO 1461 in France

NEN EN 1461 in USA

All types of cable trays and medium- heavy/heavy support systems are deliverable conditional of manifactoring in hot dip galvanized. This program is marked with the symbol **F**.

### Stainless steel

Considering the aspects of high corrosion resistance, easily cleanable surface, ability of recycling, and fire resistance, stainless steel becomes increasingly the material of first choice. Especially for the chemical, paper, textile and food industry, in sewages, refineries, car tunnels and in off-shore areas it is being commonly used.

Regarding the long lasting life cycle of such constructions, stainless steel is often times the economically most suitable solution in spite of the higher initial investment. In case of insufficient corrosion resistance the investments are accelerated by business interruption, rearrangement of cable loads, exchange of structural components.

Compared to various plastic materials stainless steel features through high firmness, resistance against fire and heat, as well as the emission free manner in case of fire and mechanical processing.

The commonly used material No.: 1.4301 is marked with the short description X5CrNi 18-10 according to EN 10088-3 and has been approved by the German Institute for Construction Engineering in Berlin under the general admittance Z-30.3-6 for construction processes.

Assignment to recent and outdated norms:

|            |                     |
|------------|---------------------|
| EN 10088-3 | 1.4301 X5CrNi 18-10 |
| AISI       | 304                 |
| UNS        | S 30400             |
| BS         | 304 S31             |
| AFNOR      | Z7CN 18-09          |

PUK offers a complete high-grade steel program made of: bracket supports, brackets, cable trays, ladders, vertical ladders, profile rails and cable clamps.

Nuts and bolts comply to steel-group A2 (according to ISO 3506). This is indicated with the symbol **E**.

# Corrosion prevention

## Technical information

The stainless steel program is available on request in material No. 1.4404 with the short appellation X2CrNiMo 17-12-2 (according to EN 10088-2 and -3) and has been also certified by the German Institute for Construction Engineering in Berlin. Nuts and bolts comply to steel-group A4 (according to ISO 3506).

Assignment to recent and outdated norms:

|            |                         |
|------------|-------------------------|
| EN 10088-3 | 1.4404 X2CrNiMo 17-12-2 |
| AISI       | 316 L                   |
| UNS        | S 31603                 |
| BS         | 316 S 11                |
| AFNOR      | Z3CND17-11-02           |
| DIN 17440  | 1.4404                  |

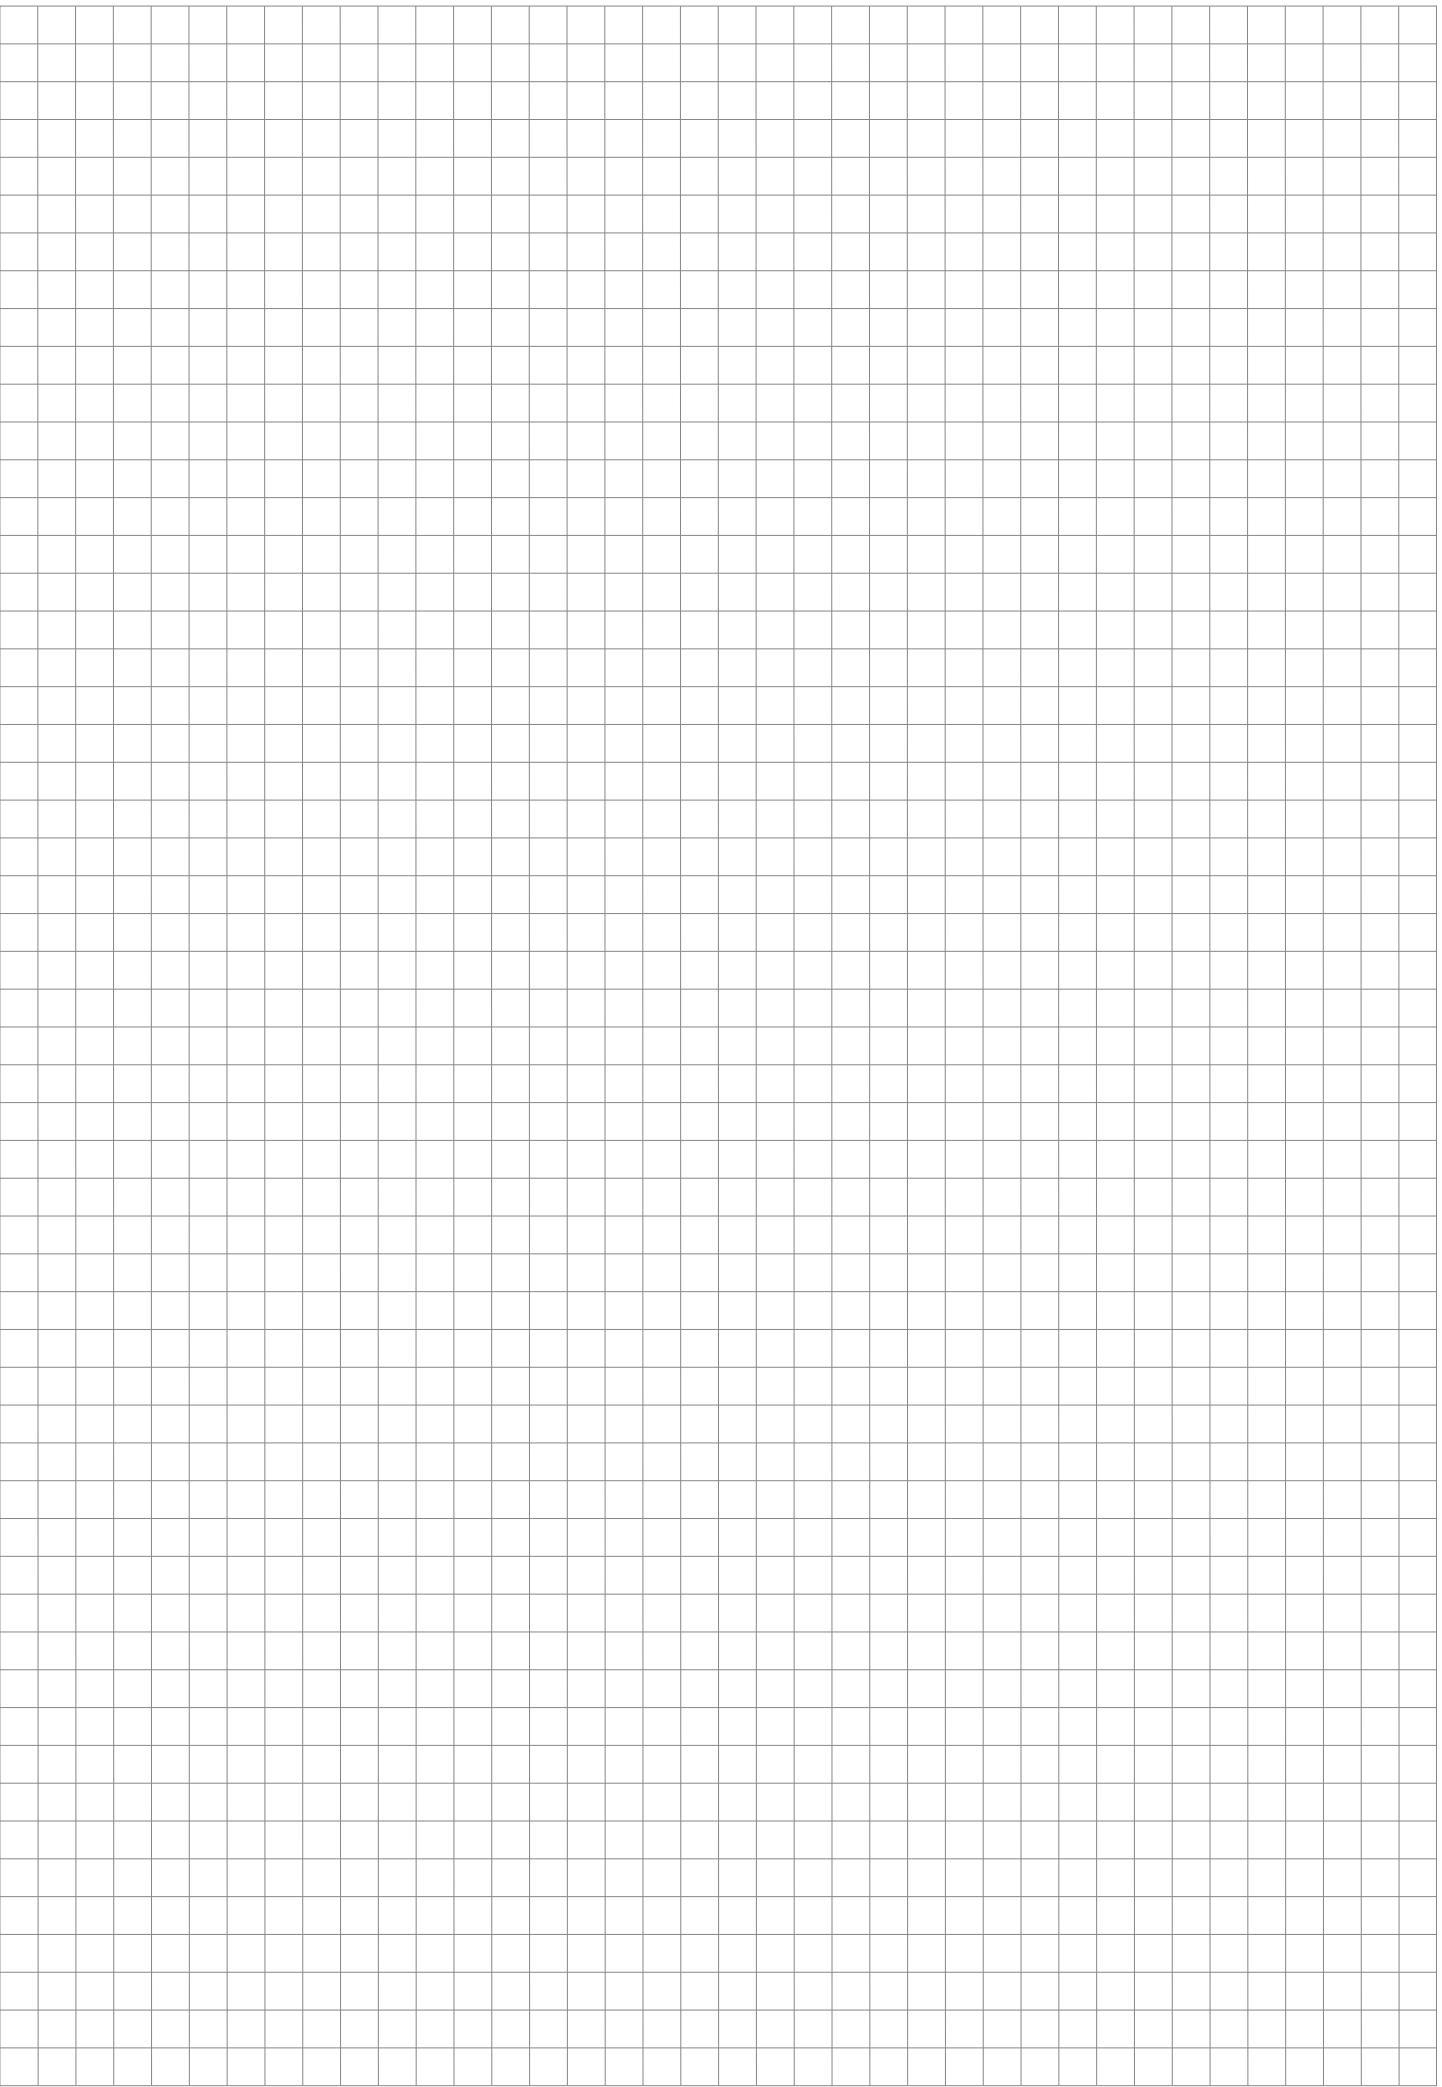

Alternatively available in 1.4571. This steel type is marked with **E4**.

Other materials of the same corrosion category available on request.

For special applications (light- and cable support constructions in car tunnels according to ZTV-ING) the high alloyed material No. 1.4529 is available.

### Plastic Coating

For the use in zinc aggressive environments (pH index < 6 or > 12.5) or for indication through colours, zinc-coated construction parts can be coated with plastic on request (for example with epoxy or polyester).

### Cable trays

The choice is made based on:

1. the number or volume of cables to be passed in a cable tray (load carrying capacity of the tray)
2. the distance between the support points of the tray (type of the tray)
3. the distance between the support points of the tray (load carrying capacity of the tray)

### Re 1. Cable capacity/usable diameter

If the cable volume (type of cables, size, number) is not known, table 1 can help with the estimation: For cables of any size the volume needed is multiplied with the number of cables in order to determine the total sum. The result is the minimum cross section area of the cable tray needed, which may have to be extended by a standby factor). The regulations of the VDE 0100 regarding the load of cable trays must be observed in all cases.

**Table 1: Space requirements for cables type NYY**

| Cable NYY | Diameter (mm) | Space per cable (app.) | Number of cables |                 |
|-----------|---------------|------------------------|------------------|-----------------|
| 4x1.5     | 12.5          | 1.5 cm <sup>2</sup>    | x                | =               |
| 4x2.5     | 14.0          | 1.8 cm <sup>2</sup>    | x                | =               |
| 4x6       | 16.5          | 3.0 cm <sup>2</sup>    | x                | =               |
| 4x16      | 22.0          | 5.0 cm <sup>2</sup>    | x                | =               |
| 4x35      | 31.0          | 12.0 cm <sup>2</sup>   | x                | =               |
| 4x70      | 41.0          | 16.0 cm <sup>2</sup>   | x                | =               |
| A ≥ Σ     |               |                        |                  | cm <sup>2</sup> |

(Source: EN ISO 12944-2)

The usable diameter area (A) of each cable tray is specified in the catalogue. If needed, several cable trays must be installed in parallel.

### Re 2. Type of cable tray/weight of cable

If the total weight of the cables is unknown, table 2 can help with the estimation: For any cable size, the cable weight is multiplied by the number of cables to determine the total sum. The result is the estimated cable load (Q).

All specifications for carrying capacity listed in this catalogue relate to the respective product. The carrying capacity of the installed system depends on the actual configuration and specifically on the operational discharge of load into the structure.

**Table 2: Weight of cables type NYY**

| Cable NYY        | Weight of cable (app.) | Number of cables |   |
|------------------|------------------------|------------------|---|
| 4x1.5            | 2.3 N/m                | x                | = |
| 4x2.5            | 3.0 N/m                | x                | = |
| 4x6.0            | 5.2 N/m                | x                | = |
| 4x16             | 11.0 N/m               | x                | = |
| 4x35             | 22.0 N/m               | x                | = |
| 4x70             | 41.0 N/m               | x                | = |
| Q = $\Sigma$ N/m |                        |                  |   |

With regard to security, the highest possible cable load is pivotal. It is calculated by multiplying the usable diameter by the specific cable weight\*. The result ( $Q_{LK}$ ) for each cable tray is listed in this catalogue.

\* type of cable tray  
cable ladder  
cable tray  
wire-mesh cable tray

|                                      |  |
|--------------------------------------|--|
| Cable performance cable ( $Q_{LK}$ ) | specific cable weight<br>2.8 N/m pro cm <sup>2</sup> |
| control cable ( $Q_{SK}$ )           | 1.5 N/m pro cm <sup>2</sup>                          |

### Re 3. Distance between supports (StA)

The recommended distance between supports is 1.5 meters. Nevertheless, the actual possible distance between supports can be considerably higher (up to 10 m), depending on available points of fastening (pillars, supporting structures).

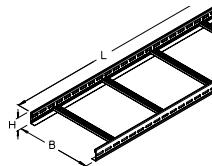

The capacity diagrams of the cable trays list the maximal load capacity ( $Q_{max}$ ) a cable tray can carry securely with the given support distance.

Please observe the following calculation examples!

# Choice of products

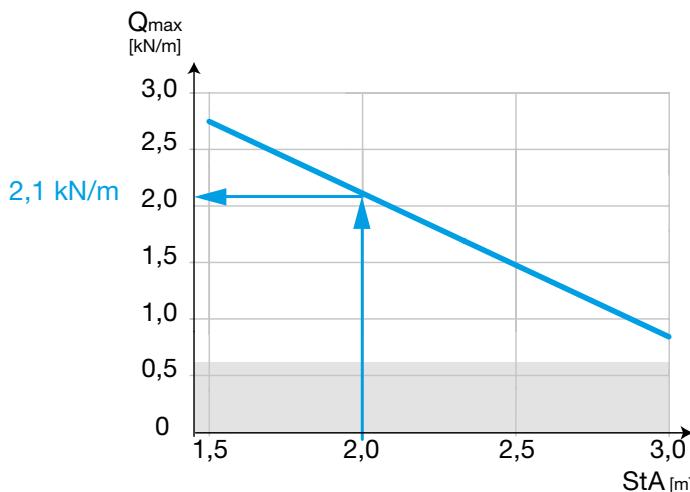

## Technical information

**How to determine the additional load based on the example LGG 60-40 with a support distance StA of 2,0 m**

**LGG 60** Cable ladder, height = 60 mm

| Article number   | H<br>mm | B<br>mm | L<br>mm | A<br>cm <sup>2</sup> | Q <sub>sk</sub><br>kN/m | G<br>kg/m |
|------------------|---------|---------|---------|----------------------|-------------------------|-----------|
| <b>S   F   E</b> |         |         |         |                      |                         |           |
| <b>LGG 60-20</b> | 60      | 200     | 6000    | 81                   | 0.23                    | 2.64      |
| <b>LGG 60-30</b> | 60      | 300     | 6000    | 122                  | 0.34                    | 2.87      |
| <b>LGG 60-40</b> | 60      | 400     | 6000    | 162                  | 0.45                    | 3.10      |
| <b>LGG 60-50</b> | 60      | 500     | 6000    | 203                  | 0.57                    | 3.33      |
| <b>LGG 60-60</b> | 60      | 600     | 6000    | 243                  | 0.68                    | 3.56      |

The difference between the maximum load capacity and the possible cable load equals the highest permissible additional load:

$$\begin{aligned} Q_{\max} &= 2.10 \text{ kN/m} \\ Q_{LK} &= -0.45 \text{ kN/m} \\ \text{add. load} &= 1.65 \text{ kN/m} \end{aligned}$$

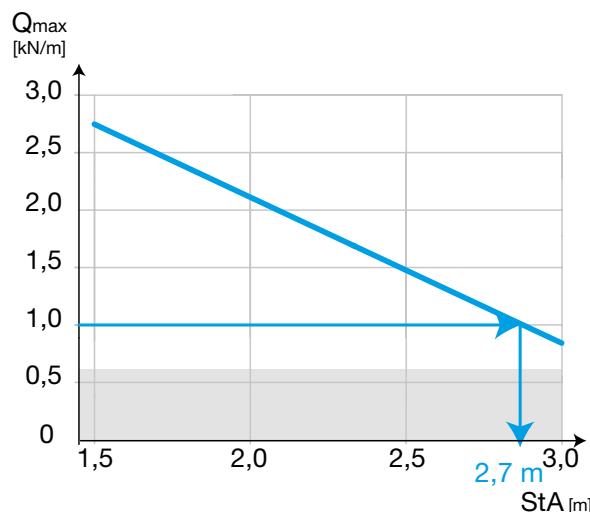

The cable tray load diagrams furthermore provide the maximum permissible support distance figures when the load is known.

**How to determine the maximum support distance StA based on the example LGG 60-60:**

**LGG 60** Cable ladder, height = 60 mm

| Article number   | H<br>mm | B<br>mm | L<br>mm | A<br>cm <sup>2</sup> | Q <sub>sk</sub><br>kN/m | G<br>kg/m |
|------------------|---------|---------|---------|----------------------|-------------------------|-----------|

| <b>LGG 60-40</b> | 60      | 400     | 6000    | 162                  | 0.45                    | 3.10      |
| <b>LGG 60-50</b> | 60      | 500     | 6000    | 203                  | 0.57                    | 3.33      |
| <b>LGG 60-60</b> | 60      | 600     | 6000    | 243                  | 0.68                    | 3.56      |

$$\begin{aligned} \text{Cable load} &= 0.68 \text{ kN/m} \\ \text{add. load} &= 0.40 \text{ kN/m} \\ Q_{\max} &= 1.08 \text{ kN/m} \end{aligned}$$

Maximum distance between supports is 2.7 meters.

The load capacity diagrams allow for a security reserve of at least 70% until possible failure (according to DIN EN 61537). Nevertheless cable trays may not be used for walking! If the maximum load capacity ( $Q_{\max}$ ) or the maximum distance between supports of the selected cable tray is insufficient, types with a higher load capacity must be considered. If these do not meet the requirements either, a cable tray type with a higher load capacity must be chosen:

light  $\Rightarrow$  heavy:

Wire-mesh cable tray  $\Rightarrow$  cable tray  $\Rightarrow$  cable ladder  $\Rightarrow$  wide-span cable tray

### Wide-span cable trays

are suitable for wide distances between supports. The load carrying capacity of such "cable bridges" primarily depends on the firmness and thus on the height of the side profiles. However, an increased side height also means an increased volume capacity and thus a higher maximum cable load.

This generally leads to the risk of unplanned overloads/overstress; therefore the wide-span cable trays offer the following solutions to said risk:

- an elevated cable tray bottom
- electrically welded connection of side rail and rung
- almost symmetric torsion-free side rail profiles
- at least 70% of security reserve in the load carrying capacity specifications\* (see explanations EN 61537)

This information applies to all wide-span cable trays if side rail supports (WPHS) are mounted at the support point (bracket).

Cable trays may not be used for walking or as ladders. Wide-span cable trays may have a higher volume capacity than load carrying capacity depending on the distance between supports. Specifications on load carrying capacity based on the distance between supports need to be complied with.

### Supporting structures

As a rule, supporting structures for the trace route contain on ceilings of steel bracket and ceiling bracket support (stem) and on walls of wall bracket or bracket support and stem bracket.

In order to select construction pieces of sufficient weight load ability, firstly the load of each cable tray at the support point must be determined:

Bracket load  $P = (\text{cable load } Q + \text{weight of cable tray } w + \text{additional load}) \times \text{distance between supports StA}$

$$P = (Q + w) \times \text{StA}$$

### 1. Bracket (extension)

The load carrying capacity of the bracket ( $P_{\max}$ ) must be higher than the above determined bracket load ( $P$ ).

Please note that the load carrying capacity of the cable tray depends on the width of the selected cable tray ( $B_2$ ). The load carrying capacity tables always presume the respective size of cable tray/bracket ( $L \approx B_1 \approx B_2$ ).

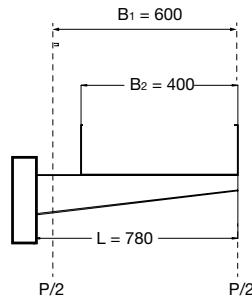

However, if the bracket is considerably longer and the cable tray is laid flush with the bracket tip, the following is valid by approximation: For example Konsole KWS 070 and cable ladder LGG 60-40:

#### KWS Wall bracket, heavy

| Article number | B<br>mm | L<br>mm |
|----------------|---------|---------|
| <b>F</b>       |         |         |
| <b>KWS 020</b> | 200     | 280     |
| <b>KWS 030</b> | 300     | 380     |
| <b>KWS 040</b> | 400     | 480     |
| <b>KWS 050</b> | 500     | 580     |
| <b>KWS 060</b> | 600     | 680     |
| <b>KWS 070</b> | 600     | 780     |

#### LGG 60 Cable ladder

| Article number   | H<br>mm | B<br>mm |
|------------------|---------|---------|
| <b>S   F   E</b> |         |         |
| <b>LGG 60-20</b> | 60      | 200     |
| <b>LGG 60-30</b> | 60      | 300     |
| <b>LGG 60-40</b> | 60      | 400     |
| <b>LGG 60-50</b> | 60      | 500     |
| <b>LGG 60-60</b> | 60      | 600     |

applies as follows:

$$P_{zul} \approx P_{\max} \left( \frac{L - \frac{B_1}{2}}{L - \frac{B_2}{2}} \right)$$

$L$  = Length of the bracket

$B_1$  = verified width of the cable tray

(at  $L \leq 580$  mm  $B_1 \approx L$ ;

at  $L > 580$  mm  $B_1 = 600$  mm)

$B_2$  = selected width of the cable tray

The load carrying capacity specifications correspond to the values verified and certified according to EN 61537.

## 2. Ceiling bracket support (stem)

Ceiling bracket supports are stressed mainly by bending forces in case of one sided mounting of cable trays. Each individual bracket causes a so-called bending moment ( $M_i$ ) in the stem which is determined by the bracket load ( $P_i$ ) and overhang length ( $l_i$ ) – ( $M = P \times l_i$ ). The overhang length depends on the bracket length ( $L$ ) and on the width of cable tray ( $B$ ).

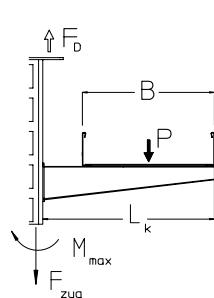

The sum of the individual bending moments ( $M_i$ ) must not exceed the permissible moment ( $M_{max}$ ). The  $M_{max}$  for every stem is specified in the catalogue.

If cable trays are mounted to both stem sides, the above said must apply to each of the two sides, since a one-sided equipment with cables (during the laying of cables) can usually not be excluded.

In order to simplify the choice of the suitable stem, the maximum bracket load ( $P_{max}$ ) is specified for every cable tray width ( $B$ ) with the corresponding bracket length ( $L_k$ ).

If only one cable tray is to be fastened to the stem on one side (or only cable trays of equal width), the table determines directly whether  $P \leq P_{max}$  (resp.  $\sum P_i \leq P_{max}$ ) applies.

### Example: KDI

$L \leq 1000$ :  $M_{max} = 1600$  Nm

$L > 1000$ :  $M_{max} = 2200$  Nm       $F_zug = 20$  kN

| KDI Bracket support, heavy, profile |                   |                               |                               |                   |  |
|-------------------------------------|-------------------|-------------------------------|-------------------------------|-------------------|--|
| B mm                                | L <sub>K</sub> mm | P <sub>max L&gt;1000</sub> kN | P <sub>max L&lt;1000</sub> kN | F <sub>D</sub> /P |  |
| 100                                 | 120               | 20.0                          | 14.5                          | 1.3               |  |
| 200                                 | 220               | 13.8                          | 10.0                          | 1.6               |  |
| 300                                 | 320               | 10.5                          | 7.6                           | 1.9               |  |
| 400                                 | 420               | 8.5                           | 6.2                           | 2.3               |  |
| 500                                 | 520               | 7.1                           | 5.2                           | 2.6               |  |
| 600                                 | 620               | 6.1                           | 4.4                           | 3.0               |  |

### Example: LGG 60-40

$B = 400$ , stem length < 1 m

$$P_{max} = 6,2 \text{ kN}$$

If cable trays of different widths require a one-sided mounting to the stem, the share of the maximum load must be calculated for each individual cable tray width:  $P_B/PB_{max}$ .

The sum of all these shares for the selected stem must be  $\leq 1.0$ :

$$\sum \frac{P_B}{P_{B_{max}}} < 1$$

Example: Two cable ladders, type LGG 60, have to be mounted single-sided to brackets on a ceiling bracket support.

The distance between the supports (StA) is 1.5 meters.

### LGG 60 Cable ladder, height = 60 mm

# Choice of products

## Technical information

|                                      |  |  |
|--------------------------------------|--|--|
| cable ladder width<br>bracket length | B <sub>1</sub> = 400 mm<br>L <sub>1</sub> = 420 mm | B <sub>2</sub> = 600 mm<br>L <sub>2</sub> = 620 mm |
| cable load (based on catalogue):     | Q <sub>LK</sub> = 450 N/m                          | Q <sub>2</sub> = 680 N/m                           |
| plus weight of cable ladder:         | 31 N/m   | 35,6 N/m   |
| equals sum of load:                  | 481 N/m  | 715,6 N/m  |

|   |                          |                            |
|---|--------------------------|----------------------------|
| Sum of load<br>multiplied by distance<br>between supports | 481 N/m<br>x 1.5 m       | 715,6 N/m<br>x 1.5 m       |
| equals bracket load:                                      | P <sub>1</sub> = 721,5 N | P <sub>2</sub> = 1.073,4 N |

For bracket support KDU 60  
(based on catalogue): P<sub>max 400</sub> = 5.0 kN P<sub>max 600</sub> = 3.6 kN

The sum of shares equals:  $\sum \frac{P_B}{P_{B\ max}} = \frac{721.5\ N}{5,000\ N} + \frac{1.073.4\ N}{3,600\ N} = 0.44 (< 1)$

According to the above calculation, the selected bracket support may be used. However, if

$$\sum \frac{P_B}{P_{B\ max}} > 1$$

either a bracket support with a higher load capacity must be used or the support distance must be reduced.

The load capacity specifications correspond to the values verified and certified according to DIN EN 61537.

In the process of laying cables, high additional loads can occur. These additional loads may not be discharged into the cable support system.

# Discharge of load into the construction piece

## Technical information

All specifications for carrying capacity listed in this catalogue relate to the respective product. The carrying capacity of the installed system depends on the actual configuration and specifically on the operational discharge of load into the construction piece. In the process of laying cables, high additional loads can occur. These additional loads may not be discharged into the cable support system.

The following illustration can merely serve as additional support when applying dowel approvals; the approval specifications alone are binding.

### Permissible dowel load $F_{zul}$

The vectorial overlay of various strength components effective at the anchorage point (e.g. shear force and vertical extraction force) yields the dowel load that must be lower /equal compared to the allowable dowel load listed in the approval (generally applies to all diagonal pull directions). The allowable dowel load depends on the anchorage ground material (concrete grade, brickwork stone type, etc.) as well as on its voltage load:

- cracked concrete tension zone
- verified concrete compression zone (e.g. concrete wall, support, the upper concrete beam half).

In cases of doubt, consult the responsible structural engineer.

### Reduction

The allowable dowel load must be reduced,

- if several dowels have a smaller distance between each other than measure a (centre to centre distance).
- if the distance between the dowel and a structure edge or corner is smaller than measure ar (edge distance).

The factor for the calculation of the dowel load  $F_D$  is listed in the catalogue (applies to anchors with heavier loads).

### Example: Ceiling bracket support

$$F_{D1} = \frac{P}{2} - P \cdot \frac{l}{a}$$
$$F_{D2} = \frac{P}{2} + P \cdot \frac{l}{a}$$
$$\rightarrow \frac{F_D}{P} = \frac{1}{2} + \frac{l}{a}$$

By a double-sided equipment of the bracket support the higher dowel load is always reduced.

### Example: Wall bracket

$$F_{DV} = P$$
$$F_{DH} = P \cdot \frac{l}{h}$$
$$\rightarrow \frac{F_D}{P} = \sqrt{1 + (\frac{l}{h})^2}$$

When planning the route, please generally observe that the filling volume of the cable trays may exceed the carrying capacity of the cable trays. A sufficient extent of reserves must be included; if needed multi-layer reserves should be allowed for.

See the two examples from practice on the following pages!

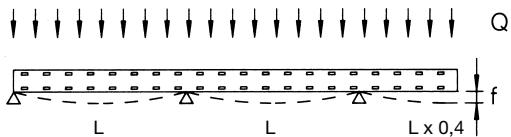

### Cable support systems

Among other things, the DIN EN 61537 regulates the following. The procedure in which mechanical characteristics of cable support elements are to be tested.

To be tested are:

- a) Cable trays including connectors in specific configurations (end field, (without connector), middle field)

L = delivery length

The conditions do not correspond to those of the most advantageous continuous support applications.

- b) Brackets as single construction components, i. e. without the stiffening effect of mounted cable trays.

The load bearing capacity specifications are based on the measured loads at a still permissible level of deformation ( $f_{zul}$ ) of the test samples. Cable support elements in the particular standard version (Sendzimir/hot dip galvanized) were tested.

### Cable trays

were tested under a specially developed testing condition ensuring that components which bend elastically under loads are strained evenly across the surface.

$$f_{zul} \text{ (longitudinal direction)} = 0.01 \times \text{support spacing}$$

$$f_{zul} \text{ (transverse direction)} = 0.05 \times \text{cable tray width},$$

### Arms/brackets

Under a vertical load the tips of the arms may lower by:

$$f_{zul} = 0.05 \times \text{arm length} \text{ (however } \leq 30 \text{ mm)}$$

### Studs (bracket holders)

- a) Studs are bent by the effects of sideway forces; the permitted offset is:

$$f_{zul} = 0.05 \times \text{stud length}$$

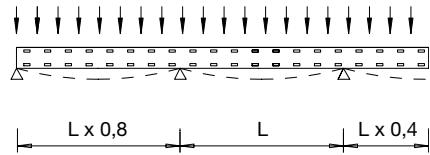

- b) tested in combination with beams under force effect,
- c) pulled by a centric load.

In each case the highest stud length was tested.

### Safety

The tested elements must withstand a load that exceeds its permissible level by at least 70%. Possible failures are not equivalent to the breakage of the component (total failure) but rather consist of a deformation, significant enough that no further increase of load bearing capacity can be registered (hammock). Consequentially, cable support elements made of metal that indicates its load condition (including overloading) by deformation are preferable to spontaneously breaking support systems made of plastic.

Wide-span systems are tested differently as follows:

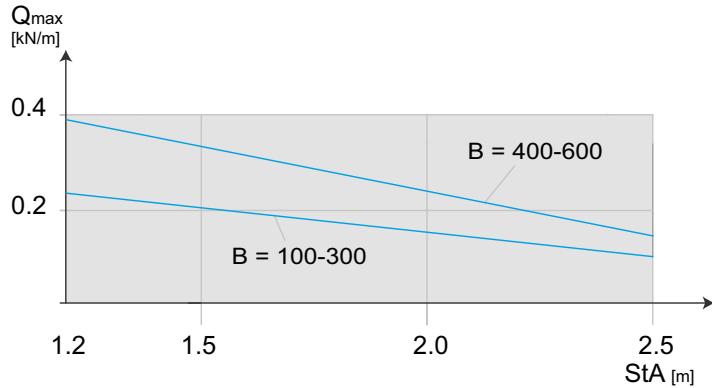

according to IEC 61537 (DIN EN 61537) 10.3.2 testing method II

# DIN EN 61537 | Equipotential Bonding

## Technical information

When planning the route, please generally observe that the filling volume of the cable trays may exceed the carrying capacity of the cable trays. A sufficient extent of reserves must be included; if needed multi-layer reserves should be allowed for.

### Example wire tray G 50:

$Q_{\text{sk}}$  Cable load based on filling volume A at maximum width B

### Equipotential bonding

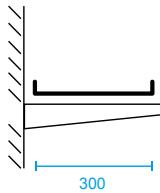

Cable ladders and cable trays are mounted with screw connections. The equipotential bonding is certified according to DIN EN 61537.

# Example wall bracket

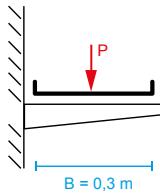

How to choose the right cable support system?

## How to choose the right cable support system?

From the tender: cable tray perforated **B** = 300 mm, **H** = 60 mm, doweled to a concrete wall with a support distance **StA** = 1.5 m.

### 1. Selecting the cable tray

**Specification:** Cable tray with a height of 60 mm and a width of 300 mm, resulting in: **RG 60-30S**. In order to calculate the bracket load **P**, the cable load **Q<sub>sk</sub>** = ? must be determined first.

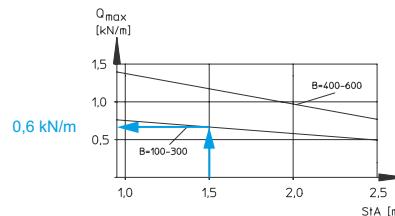

### 2. Determining the cable load Q<sub>sk</sub>

#### RG 60 Cable tray, height = 60 mm

| Article number  | H<br>mm | B<br>mm | A<br>cm <sup>2</sup> | Q <sub>sk</sub><br>kN/m | G<br>kg/m |
|-----------------|---------|---------|----------------------|-------------------------|-----------|
| <b>S</b>        |         |         |                      |                         |           |
| <b>RG 60-10</b> | 60      | 100     | 56                   | 0.09                    | 1.5       |
| <b>RG 60-20</b> | 60      | 200     | 113                  | 0.17                    | 1.93      |
| <b>RG 60-30</b> | 60      | 300     | 171                  | 0.26                    | 2.5       |
| <b>RG 60-40</b> | 60      | 400     | 228                  | 0.34                    | 3.57      |

The maximum cable load with regard to the loading capacity of cable trays is **Q<sub>sk</sub>** = 0.26 kN/m.

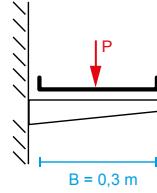

## 3. Determining the bearing capacity

With its 0.6 kN/m, the verified bearing capacity is significantly above the possible loading capacity of 0.26 kN/m.

$$Q_{\max} \text{ } 0,6 \text{ kN/m} > Q_{sk} \text{ } 0,26 \text{ kN/m} \checkmark$$

### 4. Determining the bracket load P

The bracket load **P** is determined by the cable load **Q<sub>sk</sub>** multiplied by the support distance **StA** (1.5 m from price list)

$$P = Q_{sk} \times StA$$

$$P = 0.26 \text{ (kN/m)} \times 1.50 \text{ (m)} = 0.39 \text{ kN}$$

### 5. Dimensioning the wall bracket

#### KW Wall bracket, standard

| Article number | H<br>mm | B<br>mm | L<br>mm | P <sub>max</sub><br>kN | F <sub>D</sub> /P | G<br>kg |
|----------------|---------|---------|---------|------------------------|-------------------|---------|
| <b>F</b>       |         |         |         |                        |                   |         |
| <b>KW 010</b>  | 34      | 100     | 120     | 1.4                    | 3.1               | 0.13    |
| <b>KW 015</b>  | 34      | 150     | 170     | 1.4                    | 4.1               | 0.16    |
| <b>KW 020</b>  | 56      | 200     | 220     | 2.0                    | 3.0               | 0.35    |
| <b>KW 030</b>  | 56      | 300     | 320     | 2.0                    | 4.0               | 0.50    |
| <b>KW 040</b>  | 75      | 400     | 420     | 2.4                    | 3.6               | 0.80    |

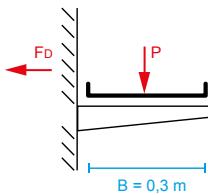

Calculated bracket load **P** = 0,39 kN, verified bracket load **P<sub>max</sub>** for **KW 030F** = 2,0 kN.

$$P_{\max} = 2,0 \text{ kN} > P = 0,39 \text{ kN} \checkmark$$

# Example wall bracket

How to choose the right cable support system?

## 6. Determining the dowel extraction force

The dowel extraction force  $F_d$  is determined based on statics and dowel approval for  $B = 300 \text{ mm}$ .

## 7. Ratio dowel extraction force $F_d$ to bracket load $P$

### KW Wall bracket, standard

| Article number | H<br>mm | B<br>mm | L<br>mm | $P_{\max}$<br>kN | $F_d/P$ | G<br>kg |
|----------------|---------|---------|---------|------------------|---------|---------|
| <b>F</b>       |         |         |         |                  |         |         |
| <b>KW 010</b>  | 34      | 100     | 120     | 1.4              | 3.1     | 0.13    |
| <b>KW 015</b>  | 34      | 150     | 170     | 1.4              | 4.1     | 0.16    |
| <b>KW 020</b>  | 56      | 200     | 220     | 2.0              | 3.0     | 0.35    |
| <b>KW 030</b>  | 56      | 300     | 320     | 2.0              | 4.0     | 0.50    |
| <b>KW 040</b>  | 75      | 400     | 420     | 2.4              | 3.6     | 0.80    |

With bracket load  $P = 0.39 \text{ kN}$ , the dowel extraction force  $F_d$  is calculated as follows:

$$F_d/P = 4.0 \Rightarrow F_d = P \times 4.0 \\ F_d = 0.39 \text{ (kN)} \times 4.0 = 1.56 \text{ kN}$$

## 8. Choice of dowel

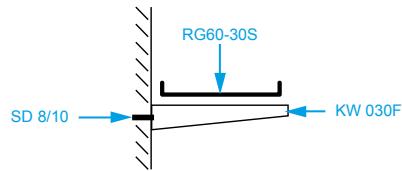

### SD Straddling dowel

| Article number  | $\varnothing$<br>mm | D<br>mm | t<br>mm | $P_{zul}$<br>kN | $L_{min}$<br>mm | G<br>kg/100 |
|-----------------|---------------------|---------|---------|-----------------|-----------------|-------------|
| <b>GV</b>       |                     |         |         |                 |                 |             |
| <b>SD 8/10</b>  | 8                   | 8       | 0 - 10  | 2.4             | 55              | 3.5         |
| <b>SD 8/30</b>  | 8                   | 8       | 0 - 30  | 2.4             | 55              | 4.4         |
| <b>SD 10/10</b> | 10                  | 10      | 0 - 10  | 4.3             | 75              | 6.2         |

For **SD 8/10**, the dowel approval results in a permissible dowel extraction force in cracked concrete of **2.4 kN**. The calculated dowel extraction force is **1.56 kN**.

**Pzul 2,40 kN > FD 1,56 kN ✓**

## Result of the dimensioned support system

### From the tender:

perforated cable tray  $B = 300 \text{ mm}$ ,  $H = 60 \text{ mm}$ , support distance  $StA = 1.5 \text{ m}$

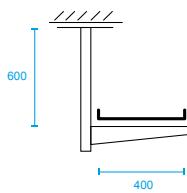

### Result

- cable tray type **RG 60-30S**
- wall bracket type **KW 030F**
- dowel type **SD 8/10**

# Example stem bracket

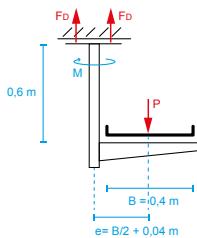

How to choose the right cable support system?

## How to choose the right cable support system

From the tender: cable tray perforated **B** = 400 mm, **H** = 60 mm, doweled 600 mm below concrete ceiling with a support distance **StA** = 1.5 m.

### 1. Selecting the cable tray

**Specification:** Cable tray with a height of 60 mm and a width of 400 mm, resulting in:  
**RG 60-40S**

In order to calculate **P**, the cable load **Q\_sk** = ? must be determined first.

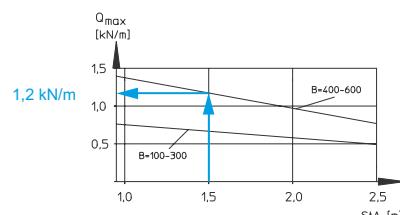

### 2. Determining the cable load **Q\_sk**

#### RG 60 Cable tray, height= 60 mm

| Article number  | H<br>mm | B<br>mm | A<br>cm <sup>2</sup> | Q <sub>sk</sub><br>kN/m | G<br>kg/m |
|-----------------|---------|---------|----------------------|-------------------------|-----------|
| <b>S</b>        |         |         |                      |                         |           |
| <b>RG 60-10</b> | 60      | 100     | 56                   | 0.09                    | 1.5       |
| <b>RG 60-20</b> | 60      | 200     | 113                  | 0.17                    | 1.93      |
| <b>RG 60-30</b> | 60      | 300     | 171                  | 0.26                    | 2.5       |
| <b>RG 60-40</b> | 60      | 400     | 228                  | 0.34                    | 3.57      |

The maximum cable load with regard to the loading capacity of cable trays is **Q\_sk** = 0.34 kN/m.

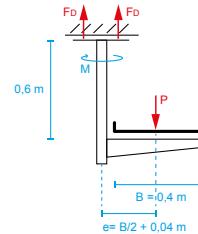

### 3. Determining the bearing capacity

At 1.2 kN/m, the verified bearing capacity with StA = 1.5 m is significantly above the possible loading capacity of 0.34 kN/m.

$$Q_{\max} \ 1,2 \text{ kN/m} > Q_{sk} \ 0,34 \text{ kN/m} \checkmark$$

## 4. Determining the bracket load **P**

The bracket load **P** is determined by the cable load **Q\_sk** multiplied by the support distance **StA** (1.5 m from price list)

$$P = Q_{sk} \times StA$$

$$P = 0.34 \text{ (kN/m)} \times 1.50 \text{ (m)} = 0.51 \text{ kN}$$

### 5. Dimensioning the stem bracket

#### KW Bracket, standard

| Article number | H<br>mm | B<br>mm | L<br>mm | P <sub>max</sub><br>kN | F <sub>D</sub> /P | G<br>kg |
|----------------|---------|---------|---------|------------------------|-------------------|---------|
| <b>F</b>       |         |         |         |                        |                   |         |
| <b>KW 010</b>  | 34      | 100     | 120     | 1.4                    | 3.1               | 0.13    |

| <b>KW 020</b>  | 56      | 200     | 220     | 2.0                    | 3.0               | 0.35    |
| <b>KW 030</b>  | 56      | 300     | 320     | 2.0                    | 4.0               | 0.50    |
| <b>KW 040</b>  | 75      | 400     | 420     | 2.4                    | 3.6               | 0.80    |
| <b>KW 050</b>  | 96      | 500     | 520     | 2.1                    | 3.4               | 1.40    |
| <b>KW 060</b>  | 96      | 600     | 620     | 2.1                    | 4.0               | 1.60    |

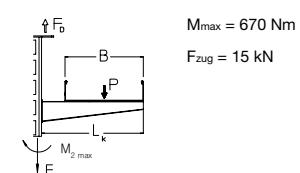

Calculated bracket load **P** = 0.51 kN, verified bracket load **P<sub>max</sub>** for **KW 040 F** = 2.4 kN

$$P_{\max} = 2,4 \text{ kN} > P = 0,51 \text{ kN} \checkmark$$

### 6. Dimensioning the ceiling stem

#### KDU 57 Bracket support, 57x30 mm

| B<br>mm | L <sub>k</sub><br>mm | P <sub>max</sub><br>kN | F <sub>D</sub> /P |
|---------|----------------------|------------------------|-------------------|
| 100     | 120                  | 6.9                    | 1.4               |
| 200     | 220                  | 4.5                    | 1.9               |
| 300     | 320                  | 3.4                    | 2.3               |
| 400     | 420                  | 2.7                    | 2.8               |
| 500     | 520                  | 2.2                    | 3.2               |
| 600     | 620                  | 1.9                    | 3.7               |

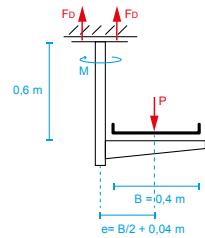

$$P_{\max} = 2,7 \text{ kN} > P = 0,51 \text{ kN} \checkmark$$

# Example stem bracket

How to choose the right cable support system?

## 7. Determining the dowel extraction force

The dowel extraction force  $F_d$  is determined based on statics and dowel approval for  $B = 400$  mm.

## 8. Dowel calculation

### KDU 57 Bracket support, 57x30 mm

| B<br>mm | L <sub>k</sub><br>mm | P <sub>max</sub><br>kN | F <sub>d</sub> /P |
|---------|----------------------|------------------------|-------------------|
| 100     | 120                  | 6.9                    | 1.4               |
| 200     | 220                  | 4.5                    | 1.9               |
| 300     | 320                  | 3.4                    | 2.3               |
| 400     | 420                  | 2.7                    | 2.8               |
| 500     | 520                  | 2.2                    | 3.2               |
| 600     | 620                  | 1.9                    | 3.7               |

Using bracket load  $P = 0.51$  kN, the dowel extraction force  $F_d$  is calculated as follows:

$$F_d/P = 2.8 \Rightarrow F_d = P \times 2.8 \\ F_d = 0.51 \text{ (kN)} \times 2.8 = 1.428 \text{ kN}$$

## 9. Choice of dowel

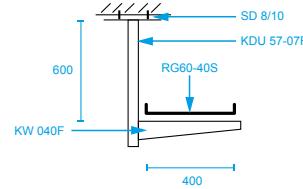

### SD Straddling dowel

# Single-spam girder with centric single load

## Technical informationen

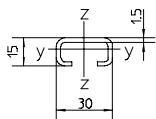

The values in the table are valid for hot-dip galvanised profiles with a centric force application F, allowing for the maximum permissible tension  $\sigma_{zul}$ , respectively the maximum permissible deflexion f (L/100).

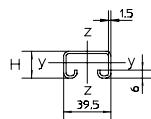

The values include a safety factor of 1.35 against failure load.

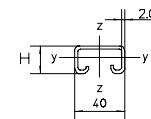

### Maximum load $F_{max}$ [N] and the corresponding deflexion f [mm]

# Cable trays

## Assembling instruction

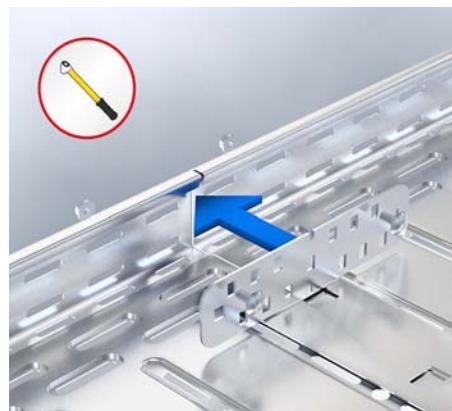

Cable trays serve the bridging of medium-size fitting distances. The support structures must be planned by engineering experts and observing the permissible torque of all screw connections.

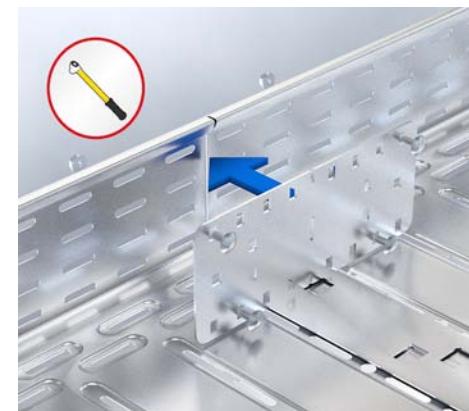

### 1 | Floor connector

From 100 mm nominal width attach floor connector (VB) to the cable tray bottom.

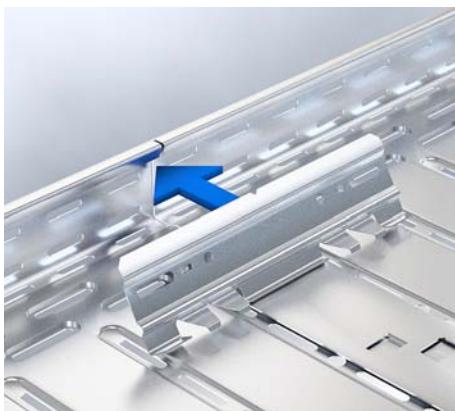

### 2 | Side connector

Push the side connector (RGV) into the cable tray side rail, screw each side rail tight using a clamping screw (KLR), then push in the connecting tray and screw to the side connector (RGV).

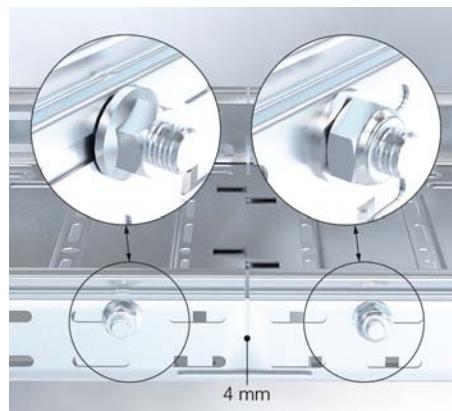

### 3 | Side connector

Type R 35, RG 35, R 60, RG 60, and RI 60 cable trays are to be screwed using one clamping screw (KLR) per side rail. Type R 85, RG 85, R 110, and RG 110 cable trays are to be screwed with two clamping screws per side rail (top and bottom).

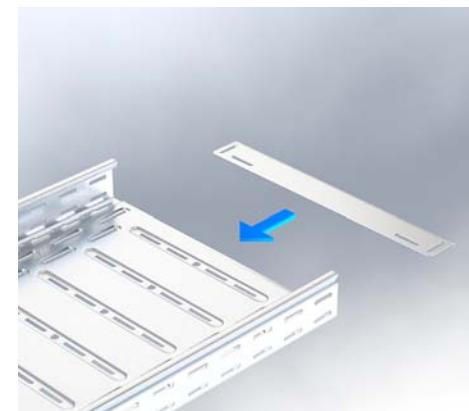

### 4 | Snap-lock connectors

Alternatively, the cable tray RG 60 can be latched on the inside below the head of the side rail using the snap-lock connector (RGVS 60) without tools. Push the snap-lock connector against the tray bottom by hand until a positive locking into place in the tray bottom occurs.

### 5 | Fixed and floating bearings

In case of extreme variations in temperature, a fixed and free bearing in the joint must be allowed for.  
Left view: Fixed bearing (with pre-stamped washer, FRSV+SEMS)  
Right view: floating bearing (with free washer FRSV+SEMSS+US) and a clearance of 4 mm.

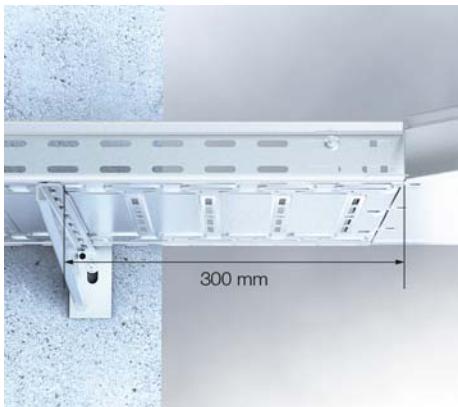

### 6 | End plate

In case of open support ends and a horizontal change in direction by < 30° open tray bottom.  
For cable tray ends or open changes in direction, push tray end plate (REB) into the bottom of the cable tray and screw together.

# Cable trays

## Assembling instruction

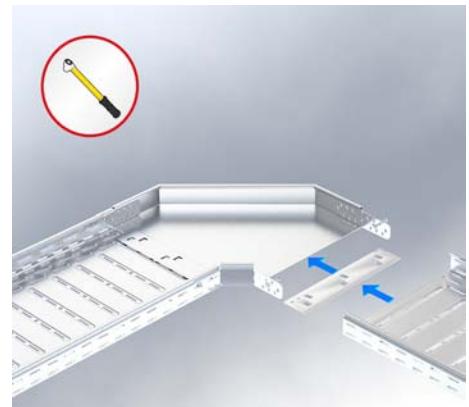

### 7 | Support distance to formed part end

Applies to all formed parts or changes in direction or open ends: The maximum distance of 300 mm with regard to the formed part end and the support must be observed.

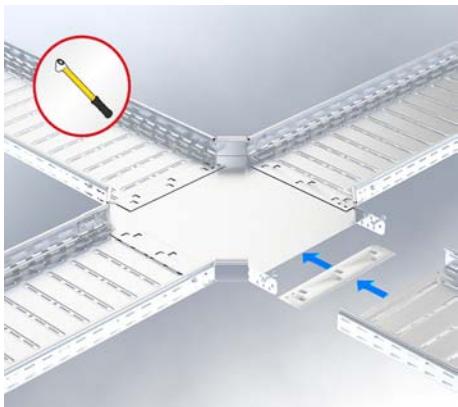

### 8 | Horizontal curve

Insert the horizontal curve (RB) and the floor connector (VB) into the cable tray and screw together in one place per side rail. For type R 85, RG 85, R 110 and RG 110 cable trays, screw in two places per side rail as described for RB.

### 9 | Horizontal curve

Insert connecting tray (RB) and floor connector (VB) into horizontal curve (RB) and screw together in one place per side rail. For type R 85, RG 85, R 110 and RG 110 cable trays, screw in two places per side rail as described for RB.

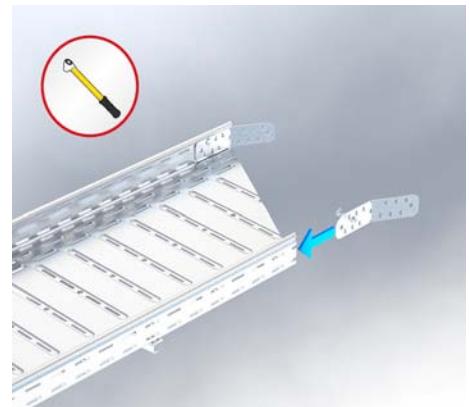

### 10 | Junction

Insert cable tray junction (RK) and floor connector (VB) into cable tray and screw together in one place per side rail. For type R 85, RG 85, R 110 and RG 110 cable trays, screw in two places per side rail as described for RB.

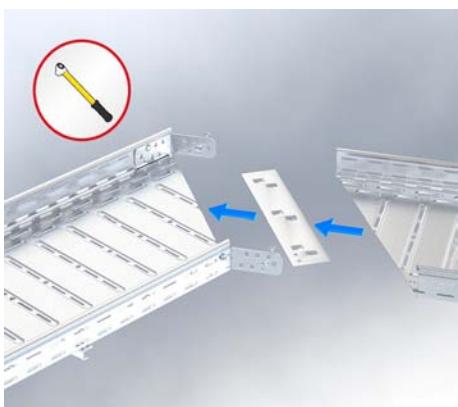

### 11 | Horizontal change in direction

For a horizontal change in direction without normed formed components, mitre the cable tray as required, deburr and cold-galvanise it.

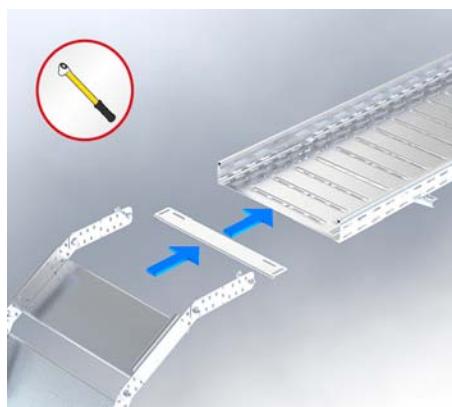

### 12 | Horizontal change in direction

Bend both side connectors (RGV) to the necessary angle, insert into the side rails of the cable tray and screw together as described for RGV (see image 3).

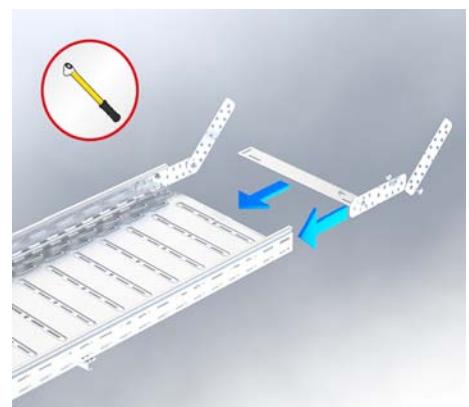

### 13 | Horizontal change in direction

Place floor connector (VB) of corresponding length inside the cable tray bottom, push connecting cable tray into side connectors (RGV) and screw together as described for RGV (see image 3).

### 14 | Curve

Push flexible cable tray curve (RVB) into cable trays and screw together as described for RGV (see image 3). Insert the cable tray end plates at the ends of cable trays, push into the bottom of the cable trays and screw together as described for RGV (see image 6).

### 15 | Vertical change in direction

Vertical change in direction without formed component: Push tray end plate (REB) into the bottom of the cable tray and screw together as described for RGV (see image 3). Screw one RGV to each side rail with projection.

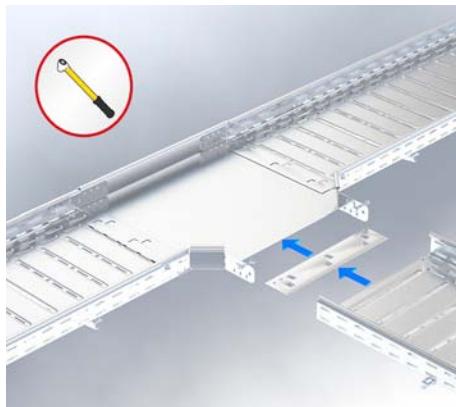

# Cable trays

## Assembling instruction

### 16 | Vertical change in direction

Insert connecting cable tray into the side connectors (RGV) and screw together (see image 3). At the cable tray ends, push cable tray end plates (REB) into the bottom of the cable tray and screw together (see image 6).

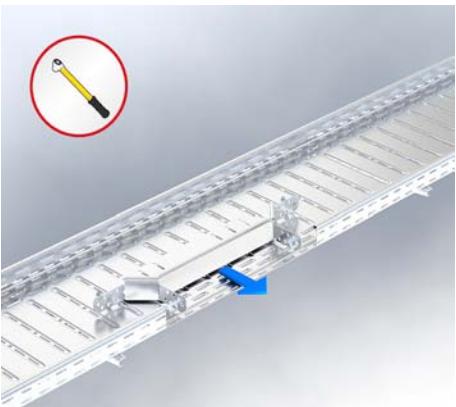

### 17 | Joint

Push joint (RA) and floor connector (VB) into the cable tray and screw together as described for RGV (see image 3). For type R 85, RG 85, R 110 and RG 110 cable trays, screw in two places as described for RB (see image 8).

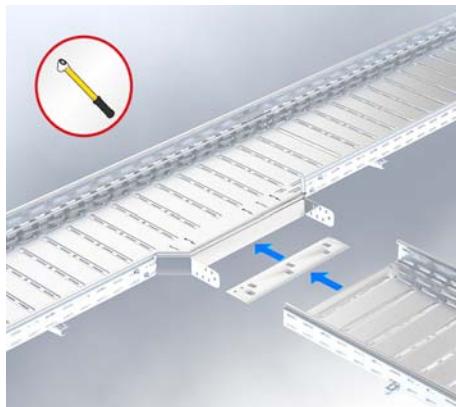

### 18 | Extension joint

Installation of extension joints manufactured on site (RAA). Cut out the side rail of the cable tray flush with the bottom in width B = the connecting cable tray width + 120 mm, deburr and cold-galvanise.

### 19 | Extension joint

Attach extension joint (RAA) and screw in one place per side rail. For type R 85, RG 85, R 110 and RG 110 cable trays screw together in two places as described for RB (see image 8).

### 20 | Extension joint

Insert connecting cable tray and floor connector (VB) into the extension joint (RAA) and screw together as described for RGV (see image 3).

### 21 | Extension angle

Installation of tray extension angles (RAE). Cut out the side rail of the cable tray flush to the bottom in width B = the extension cable tray width + 120 mm.

### 22 | Extension angle

Insert tray extension angles (RAE) into the cable trays and screw to the bottom in one place per side rail. Attach floor connector (VB).

### 23 | Extension angle

Trim extension trays by 60 mm per side rail, push onto the extension angles and screw together in one place per side rail.

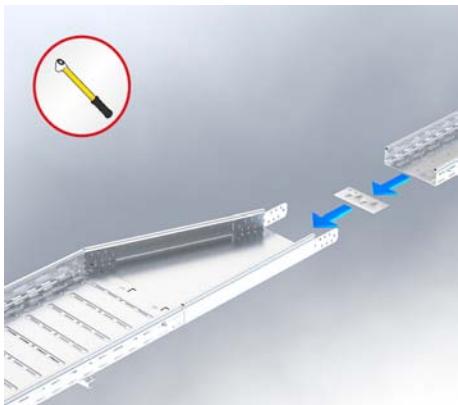

### 24 | Reduction

Insert cable tray reduction (RR) and floor connector (VB) into the cable tray and screw together in one place per side rail. For type R 85, RG 85, R 110 and RG 110 cable trays screw together in two places as described for RB (see image 8).

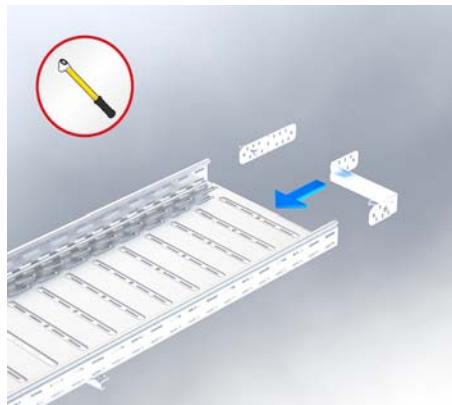

# Cable trays

## Assembling instruction

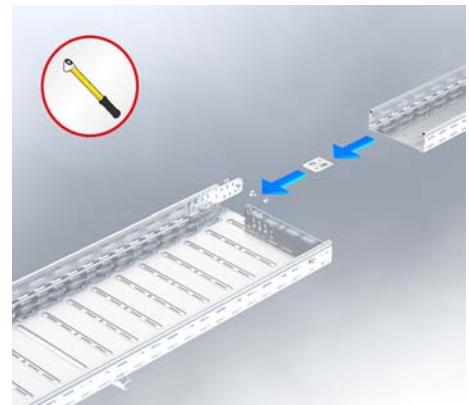

### 25 | Reduction

Insert extension cable tray and floor connector (VB) into cable tray reduction (RR) and screw together as described for RGV (see image 3).

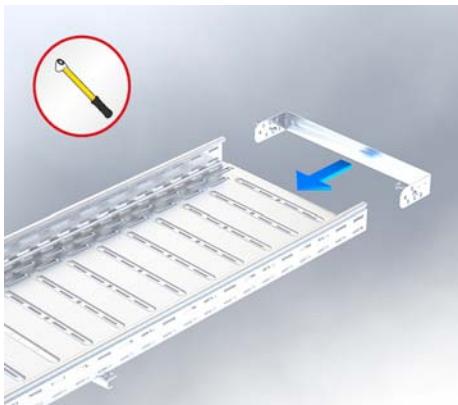

### 26 | Reduction using a closing plate

Cable tray reduction using a tray closing plate (RAB) and a side connector (RGV). Bend tray closing plate (RAB) into a Z-shape and screw side connector (RGV) and tray end plate (RAB) as described for RGV (see image 3).

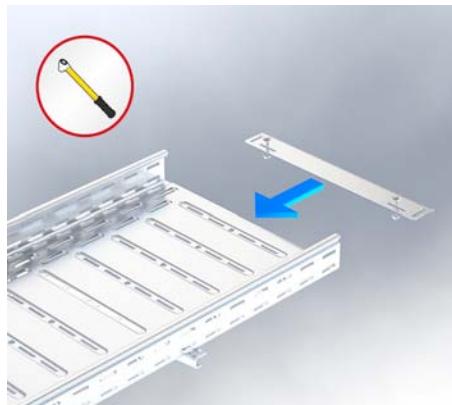

### 27 | Reduction using a closing plate

Insert extension cable tray and floor connector (VB) into the cable tray reduction (RAB) and screw together as described for RGV (see image 3).

### 28 | Closing plate

Closing of a cable tray using a tray closing plate (RAB). Bend tray closing plate into a U-shape and push into the cable tray. Screw together as described for RGV (see image 3).

### 29 | End plate

Mounting of the tray end plate for the protection of the inbound or outbound cables. Push tray end plate (REB) onto cable tray and screw to the bottom in two places if the width is at least 200 mm.

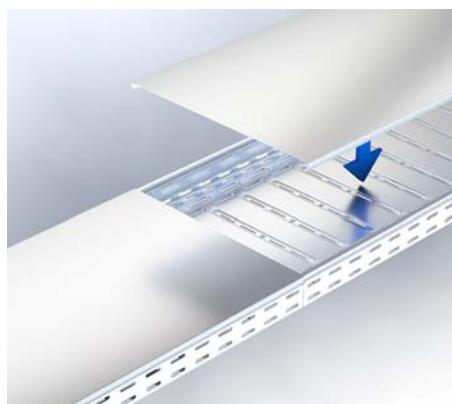

### 30 | Barrier strip

Screw barrier strip in three places (approx. 100 mm from both barrier strip ends as well as in the middle).

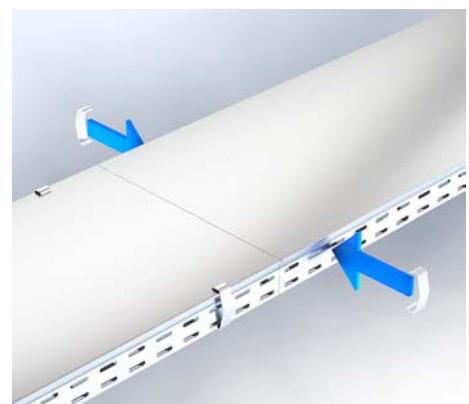

### 31 | Assembly plate

Screw the assembly plate (MP-RG) for electric components to the side rail of the cable tray in two places.

### 32 | Cover

Place the tray cover (RD) onto the cable tray and push against the side rail until a positive locking into place in the side rail occurs. For indoor use only!

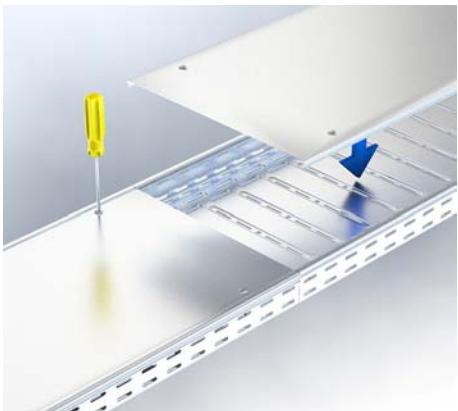

### 33 | Brackets

Place the cover brackets (RDKL) sideways onto the tray cover (RD) and push against the cover bracket (RDKL) until a positive locking into place with the cable tray bottom occurs. For indoor use only! 6 pieces / 3 metres

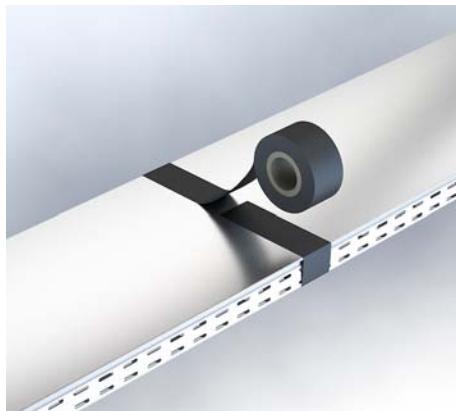

# Cable trays

## Assembling instruction

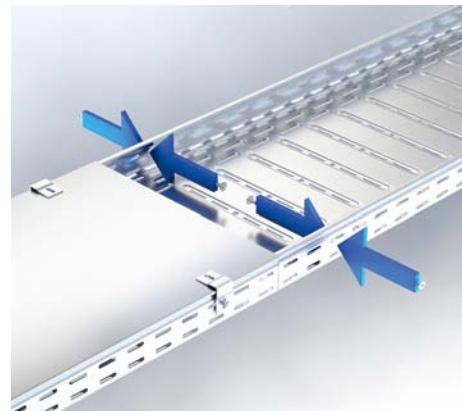

**34 | Turning bolt**

The tray cover with a turning bolt (RDR) should be mounted as described for RD (see image 32). In addition, turn the turning bolt using a screwdriver until the slit in the screw head points lengthwise towards the cable tray. For indoor use only!

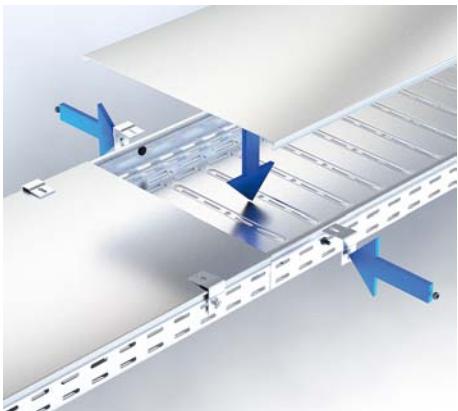

**35 | Adhesive metal strip**

Place the tray cover (RD) onto the cable tray (see image 32), then remove the separating foil of the adhesive metal strip (MKB) and wrap the strip around the cover and around the cable tray. For indoor use only!

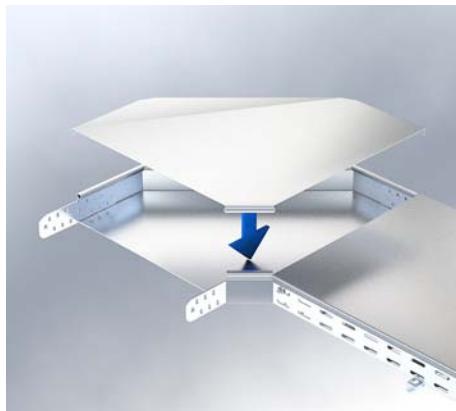

**36 | Storm safety angle**

Lead the screw (KLR) of the storm safety angle (RD-SW) on the inside through the cable tray. Push the anti-loss washer (UVS M6) on the screw.

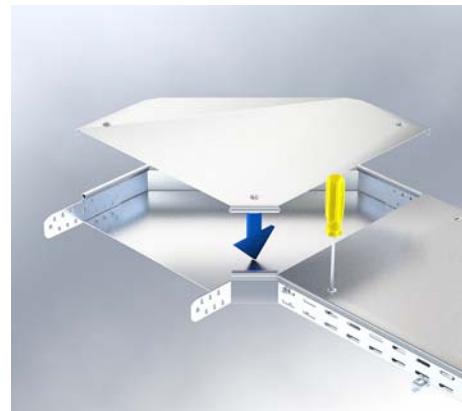

**37 | Storm safety angle**

Fasten the tray cover (RD) to the cable tray (see image 32), place the storm safety angle (RD-SW) from the outside onto the cover and screw using the screw nut SEMS M6. Suitable for outdoor use! 6 pieces / 3 metres

**38 | Curve cover**

As described for the cable tray covers (RD) (see image 32), the formed components, e.g. the curve cover (RBD), should be placed on the cable tray curve, pushing against the side rail until a positive locking into place in the side rail occurs. For indoor use only!

**39 | Curve cover**

The formed component covers with turning bolt, e.g. the tray curve cover (RDBR), are mounted with a turning bolt (RDR) as described for the tray cover (see image 34).

**40 | Storm safety angle**

Storm safety angles (RD-SW-L) for formed components covers are mounted as described for the tray cover (RD) (see image 38). In addition, the through holes should be made using an RD-SW-L as a drilling template. RAA 2 pieces, RB 3 pieces and RA and RK 4 pieces

**41 | Cutting and sectioning work**

Perform cutting and sectioning work with greatest care and observe the occupational safety.

**42 | Galvanising**

All cutting and sectioning points must be galvanised with cold zinc paint (KZF) or cold zinc spray (KZS) by the customer after the deburring.

# Wide-span cable ladders WPL

## Assembly Instruction

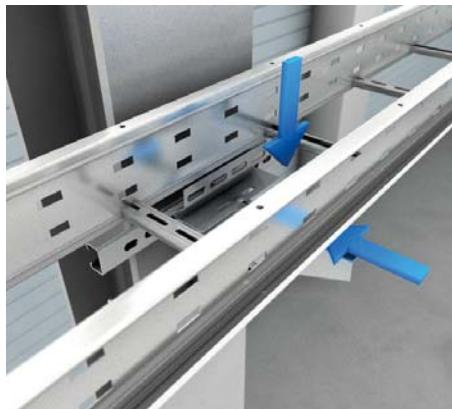

Wide-span cable ladders bridge large fastening gaps. The support structures must be planned according to engineering practice and it is a must to use side rail bearers with the brackets. All bolted connections must be tightened correctly.

### 1 | Flange mounting clamp

Bolt the rear flange mounting clamp (WPHS) to the bracket.

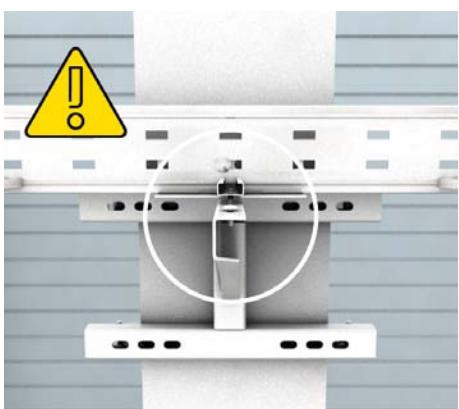

### 2 | Carefully position

Carefully position the wide-span cable ladder and push it against the fixed flange mounting clamp. Make sure the wide-span cable ladder is in the correct position!

### 3 | Correctly positioned

Correct: Make sure the bracket is correctly positioned between the rungs of the wide-span cable ladder.

### 4 | Wide-span cable ladder's

Attention: The mounting clamp (WPHS) has to be bolted to the bracket, even if a rung is positioned directly above the bracket.

### 5 | Side rail bearer

Push the front flange mounting clamp (WPHS) onto the bracket and bolt the wide-span cable ladder, bracket, and WPHS together.

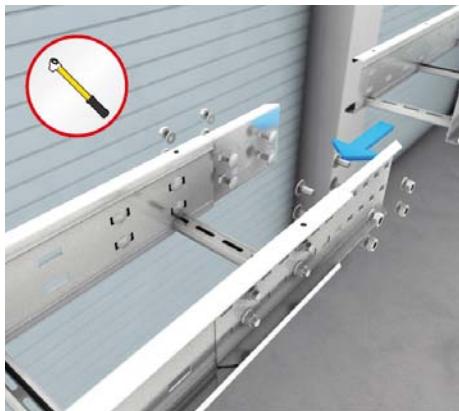

### 6 | Wide-span coupler

Insert edge connectors (WPV) into the wide-span cable ladder's side rails and secure them with four clamping screws (KLS 10x20) per side rail.

# Wide-span cable ladders WPL

## Assembly Instruction

### 7 | Connecting ladder

Insert the connecting ladder into the wide-span coupler (WPV), leaving a gap of 4 mm between the ends of the two ladders. Then, secure the second ladder to the coupler (WPV), tightening the self-locking hexagon nuts (SEMSS 10 or SEMB 10) with a torque of 3 Nm.

### 8 | Fixed bearing

Left: fixed bearing (with integral washer). Center: the 4 mm gap between the ends of the two ladders. Right: floating bearing (with unmounted washer). (Connector accessories see table on page 6)

### 9 | Horizontal bend

Insert a horizontal bend (WPLB) into the wide-span cable ladder and fix it in place with two bolts per side rail.

### 10 | Connecting ladder

Insert the next connecting ladder into the horizontal bend (WPLB) and secure it with two bolts per side rail.

### 11 | Wide-span branch piece

Insert a wide-span branch piece (WPLA) into the wide-span cable ladder and attach it with two bolts per side rail.

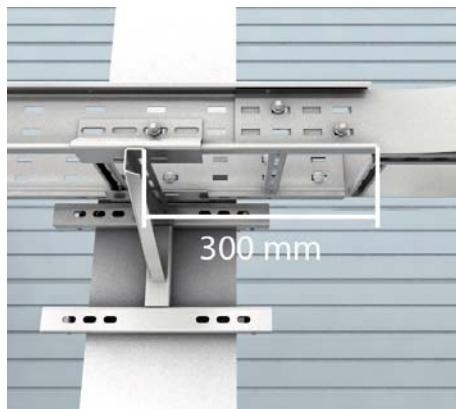

### 12 | Outside riser

Insert an outside riser (WPLF) into the wide-span cable ladder and bolt it in two places per side rail. Then, insert a connecting ladder into the outside riser (WPLF) and secure it with two bolts per side rail.

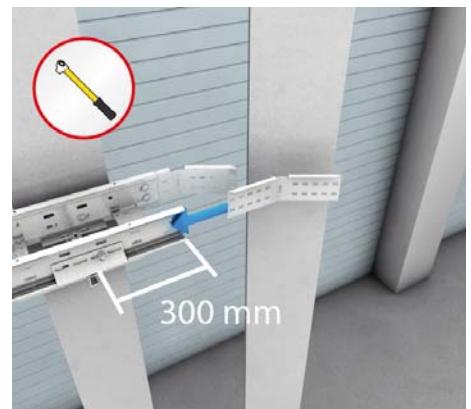

### 13 | Inside riser

Insert an inside riser (WPLS) into the wide-span cable ladder and fix it in place with two bolts per side rail. Then, insert a connecting ladder into the inside riser (WPLS) and bolt it in two places per side rail.

### 14 | Fittings

For all fitting parts to make directional changes, please make sure, that the distance between the end of the wide-span ladder and the bracket cannot exceed 300 mm.

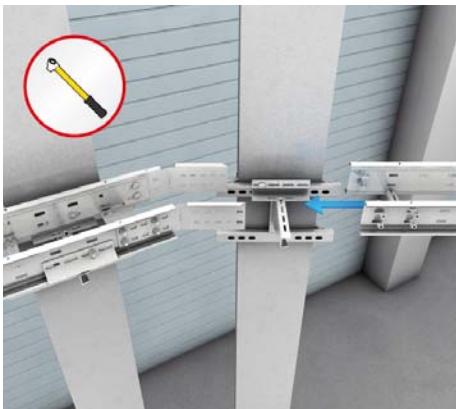

### 15 | Horizontal directional changes

For horizontal directional changes of less than 30° note: First, bend both couplers (WPVH) to the required angle on site. Then, insert them into the wide-span cable ladder and secure them with four bolts per side rail.

# Wide-span cable ladders WPL

## Assembly Instruction

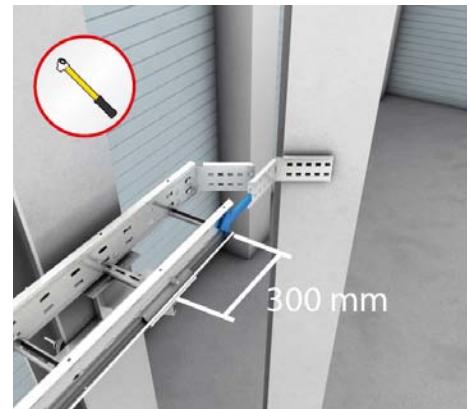

### 16 | Wide-span coupler

Now, insert a connecting cable ladder into the coupler (WPVH) and fix it in place with four bolts per side rail.

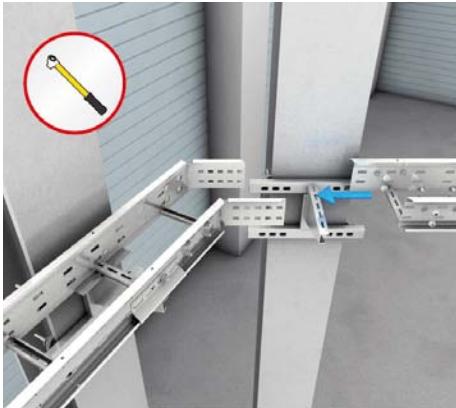

### 17 | Horizontal directional changes

For horizontal directional changes of more than 30° note, that you have to create a mitre joint for the wide-span cable ladder at the required angle, then, as necessary, remove any extra rungs. Afterwards deburr and cold-galvanise.

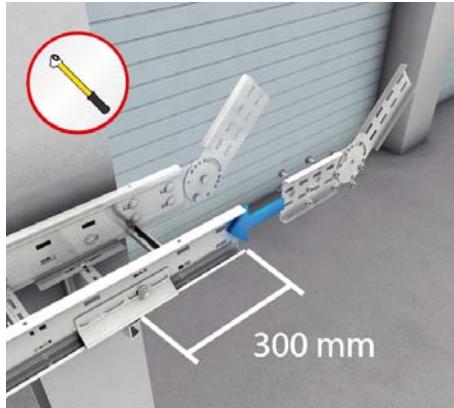

### 18 | Wide-span couplers

First, bend both wide-span couplers (WPVH) to the required angle on site. Then, insert them into the wide-span cable ladder and secure them with four bolts per side rail. The distance between the end of the wide-span ladder and the bracket cannot exceed 300 mm.

### 19 | Connecting cable

Insert a connecting cable ladder into the coupler (WPVH) and fix it in place with four bolts per side rail.

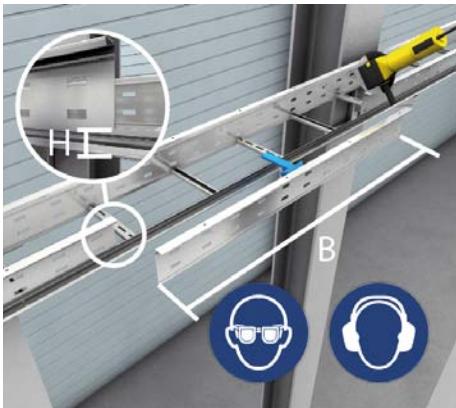

### 20 | Vertical directional changes

For vertical directional changes note, that you have to first adjust both vertical couplers (WPVV) to the required angle and fix them in place with bolts. Then insert the couplers into the wide-span cable ladder and bolt them in four places per side rail. The distance between the end of the wide-span ladder and the bracket cannot exceed 300 mm.

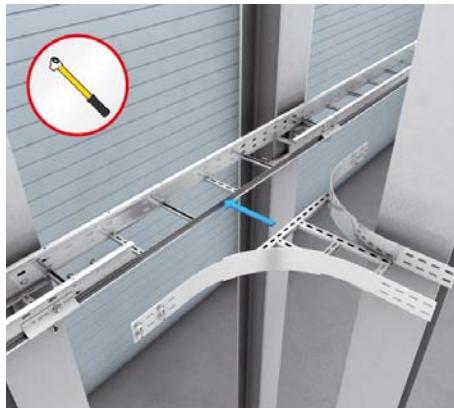

### 21 | Vertical wide-span couplers

Insert a connecting cable ladder into the couplers (WPVV) and attach it with four bolts per side rail.

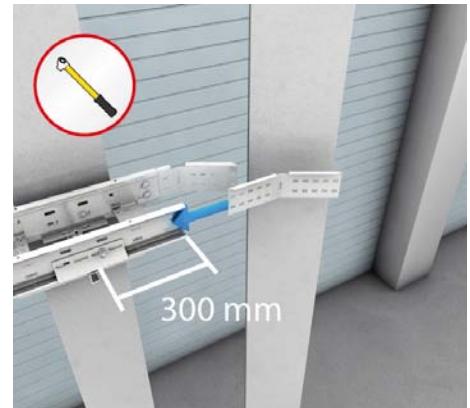

### 22 | Attachment branch-piece

To fit an attachment branch-piece (WPLAA), a portion of the connecting side rail must be removed. Cut a length of 900 mm + the width of the connecting cable tray from the side rail of the wide-span cable ladder ("B" in the photo). Don't cut through the whole height of the side rail: H=23 mm must be left at the base of the side rail to support the branch-piece.

### 23 | Attachment branch-piece

Attach a branch-piece (WPLAA) with four bolts per side rail.

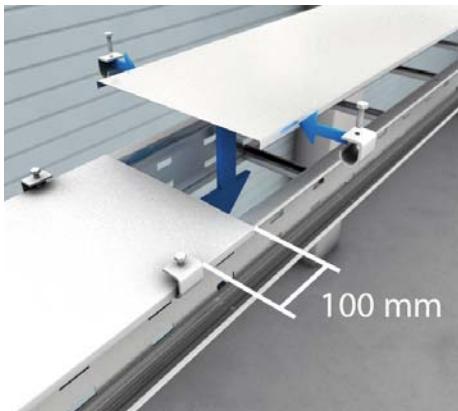

### 24 | Attachment branch-piece

Insert a connecting ladder into the branch-piece (WPLAA) and fix it in place with four bolts per side rail.

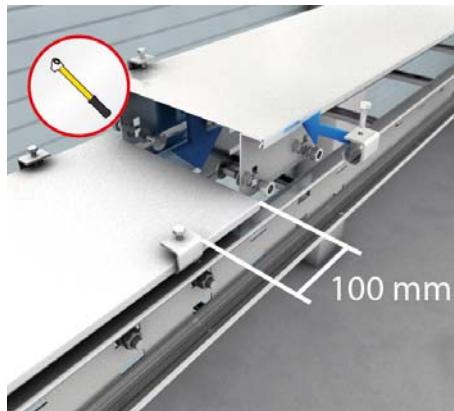

# Wide-span cable ladders WPL

## Assembly Instruction

### 25 | Cover clamps

Secure covers (WPD) with cover clamps (WPD-K) at 100 mm from each end of the cover and in the middle. (6 pieces / 3m)

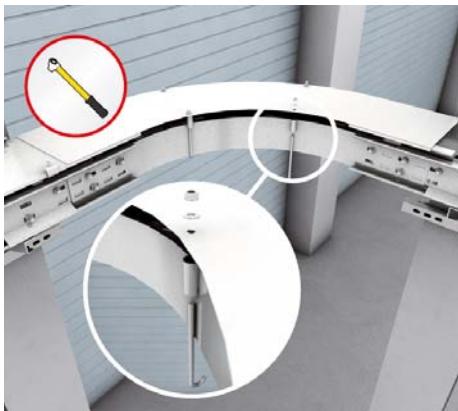

### 26 | Secure elevated covers

Secure elevated covers (WPD) with cover clamps (WPD-K and WPDA) at 100 mm from each end of the cover and in the middle. (6 pieces / 3m)

### 27 | Cover clamps

Attach covers to wide-span cable ladder fittings (WPBD, WPAD or WPKD) with cover clamps (WPFDK) at every hole.

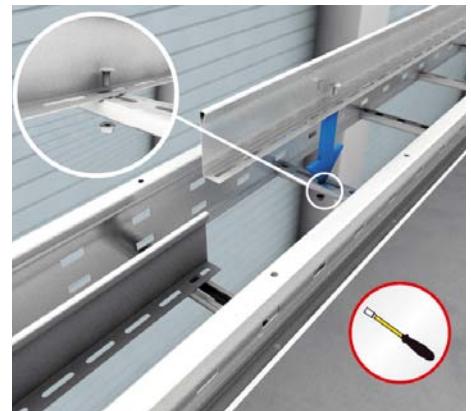

### 28 | Fittings

Bolt elevated covers to wide-span cable ladder fittings (WPBD, WPAD or WPKD) with cover clamps (WPFDKA) at every hole.

### 29 | End plate

Attach the end plate (WPKAB) to the desired rung of the cable ladder by bolting it with the provided channel nut AM16 in two places.

### 30 | Barrier strip

Using a socket wrench, secure the barrier strip (WPTR) in the front, middle, and back.

### 31 | Cutting

Cutting must be performed with the greatest care, complying to all industrial safety regulations.

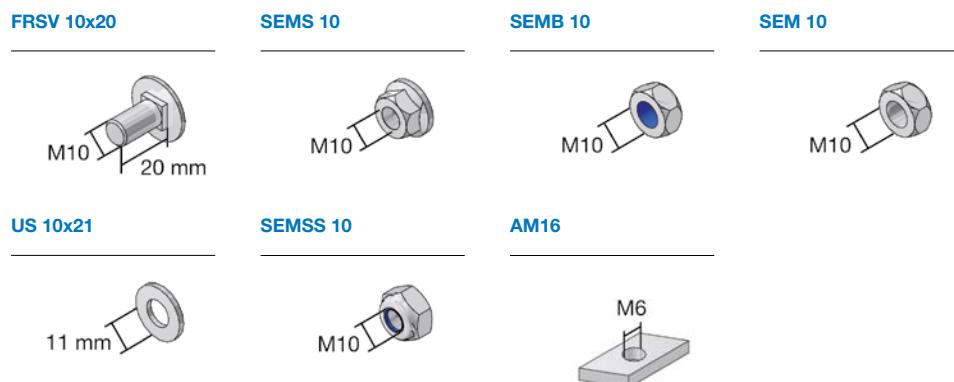

### 32 | Galvanised

After the deburring, all cut areas must be galvanised with cold zinc paint (KZF) or cold zinc spray (KZS) on site.

# Wide-span cable ladders WPL

## Assembly Instruction

Supporting structures must be torsion free! Wide-span cable ladders must not be attached to ceiling profiles (single- or double-sided). Only installation with (wall) brackets or pendant suspension is acceptable.

### 1 | Heavy-duty wall bracket

Heavy-duty wall bracket (KIS) are clamped to steel support with side-rail support (WPHS-K) and clamping claws (SKS H).

### 2 | Heavy-duty wall bracket

Heavy-duty wall bracket (KISS) are clamped to steel support with side-rail support (WPHS-A) and clamping claws (SKS M).

### 3 | Heavy-duty wall bracket

Heavy-duty wall bracket (KWS) are mounted on concrete wall with bracket rail support (WPHS-K).

### 4 | Heavy-duty wall bracket

Heavy-duty wall bracket (KWSS) are mounted on concrete wall with bracket rail support (WPHS-A).

### 5 | Horizontal

Heavy-duty corner installation (EBW) for horizontal 90° bends with side rail support (WPHS-K) has to be mounted on a concrete support.

L = width of wide-span cable ladder + 560 mm

### 6 | Profiles

Pendant suspension from profiles (e.g. KHU 60) with crossbeam and side-rail support (WPHS-K) are anchored to concrete ceiling.

# Wide-span cable trays WPR

## Assembly instruction

Wide-span cable trays are for bridging large fastening gaps. The fastening constructions must be planned by engineer and the use of side rail bearers on the brackets must be strictly kept. The permissible torque must be comply with in all screw connections.

### 1 | Flange mounting clamp

Screw backside flange mounting clamp (WPHS) on the bracket.

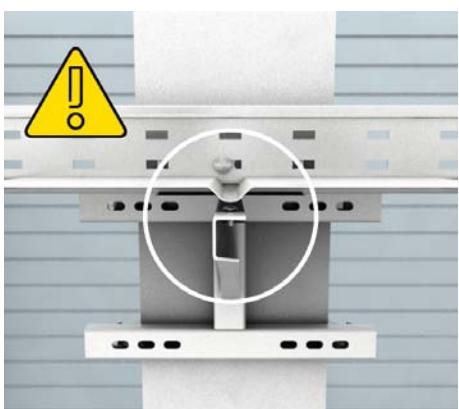

### 2 | Flange mounting clamp

Place wide-span cable tray in position and push against screwed flange mounting clamp (WPHS). Make sure the wide-span cable tray is in the correct position!

### 3 | Correctly positioned

Make sure the bracket is positioned correctly between the seams of the wide-span cable tray.

### 4 | Wide-span cable ladder's

Attention: The mounting clamp (WPHS) has to be bolted to the bracket, even if a rung is positioned directly above the bracket.

### 5 | Flange mounting clamp

Push flange mounting clamp (WPHS) onto the bracket and screw together with the wide-span cable tray and the bracket.

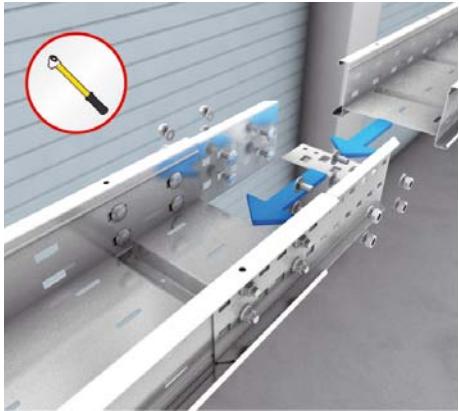

### 6 | Wide-span coupler

Push wide-span coupler (WPV) into the side rail of the wide-span cable tray and screw four times per side rail with clamping screw (KLS 10x20).

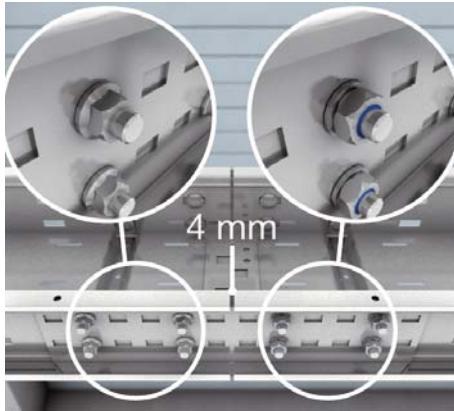

# Wide-span cable trays WPR

## Assembly instruction

### 7 | Connection plate

Insert connection plate (VB) on the bottom of the wide-span cable tray, push in connecting tray with a space of 4 mm and screw to coupler (WPV) using self-sealing screw nuts (SEMSS 10 or SEMB 10). Permissible torque: 3 Nm.

### 8 | Fixed and floating bearing

View: left fixed bearing (with integral washer), right loose bearing (with loose washer) and a 4 mm clearance. Connector accessories see page 6.

### 9 | Horizontal bend

Insert horizontal bend (WPRB) with connection plate (VB) into wide-span cable tray and screw two times per side rail.

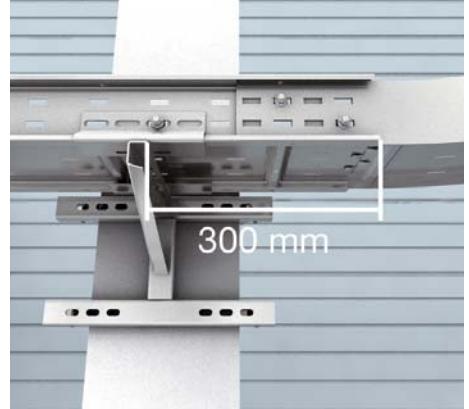

### 10 | Connecting tray

Insert connecting tray with connection plate (VB) into horizontal bend (WPRB) and screw two times per side rail.

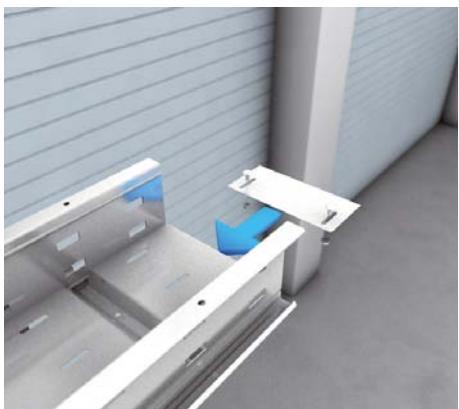

### 11 | Branch-piece

Insert branch-piece (WPRA) with connection plate (VB) into wide-span cable tray and screw two times per side rail.

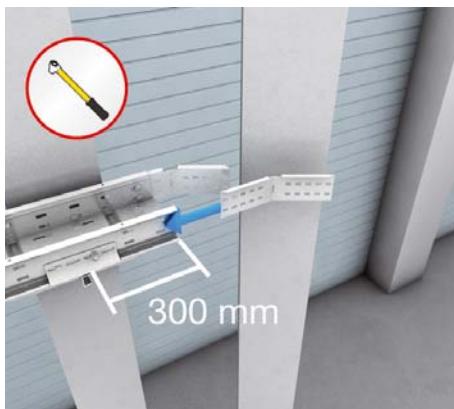

### 12 | Maximum space

It applies to all formed components or turnarounds: The maximum space of 300 mm with regard to formed component end and bracket must be complied to.

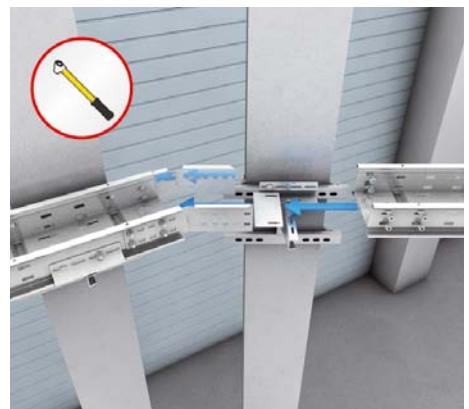

### 13 | Horizontal directional changes

Horizontal turnaround < 30 degrees – open tray bottom. Insert wide-span tray end plate (WPREB) into wide-span cable tray bottom at the wide-span cable tray ends or at open turnarounds and screw together.

### 14 | Horizontal directional changes

Bend both side connectors (WPVH) into the angle required for the construction. Insert into the side rails of the wide-span cable tray and screw four times per side rail. The maximum space of 300 mm must be kept with regard to the wide-span tray end and bracket.

### 15 | Horizontal directional changes

Push connector cable tray into the coupler (WPVH) and screw four times per side rail.

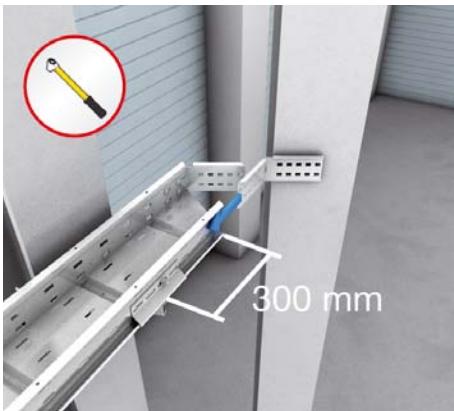

# Wide-span cable trays WPR

## Assembly instruction

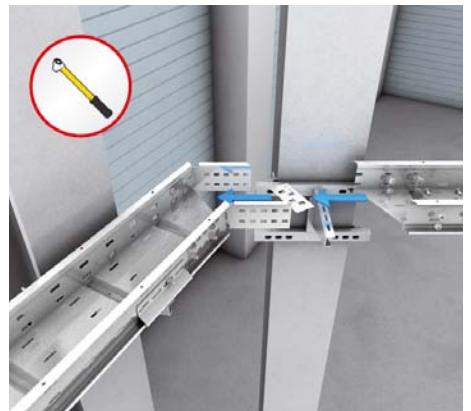

### 16 | Horizontal directional change

Horizontal turnaround > 30 degrees – closed tray bottom. Mitre wide-span cable tray as required, deflash and

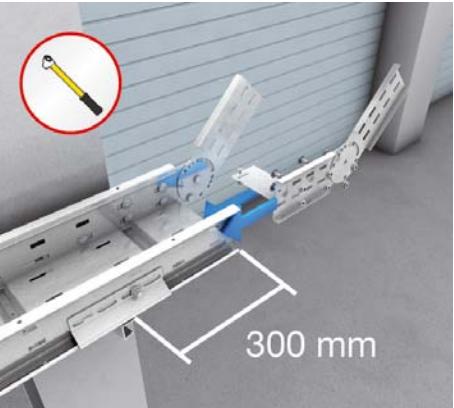

### 17 | Wide-span coupler

Bend both wide-span coupler (WPVH) into the angle required for the construction. Insert into the side rails of the wide-span cable tray and screw four times per side rail. The maximum space of 300 mm must be kept with respect to the wide-span tray end and the bracket.

### 18 | Connection plate

Insert connection plate (VB) into bottom of the wide-span cable tray, push connecting cable tray into coupler (WPVH) and screw four times per side rail.

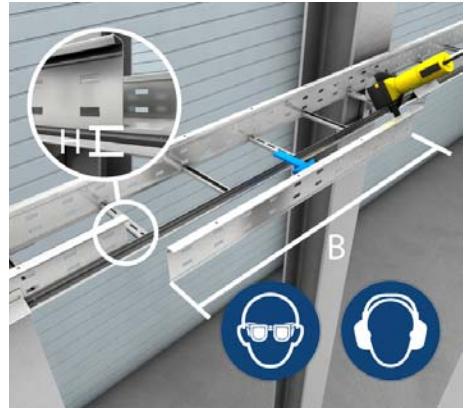

### 19 | Vertical directional change

To install a vertical turnaround, adjust and screw both couplers (WPVV) to the angle required for the construction, push into the side rails of the wide-span cable tray and screw four times per side rail. The maximum space of 300 mm must be kept with respect to the wide-span cable tray end and the bracket.

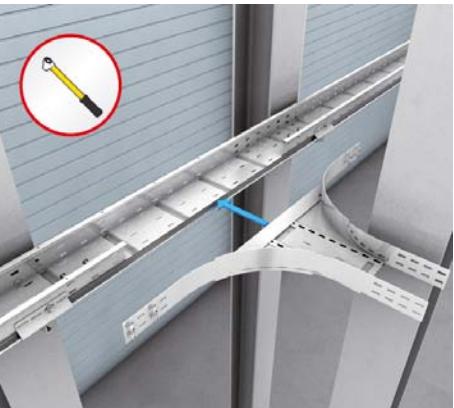

### 20 | Vertical directional change

Insert connecting tray into coupler (WPVW) and screw four times per side rail. Insert wide-span tray end plate (WPREB) into wide-span cable tray bottom at the wide-span cable tray ends or at open turnarounds and screw together.

### 21 | Branch-piece

To install branch-piece (WPRAA) cut out the side rail of the wide-span cable tray in a width  $B =$  connecting cable tray width + 900 mm flush with the floor ( $H = 23$  mm).

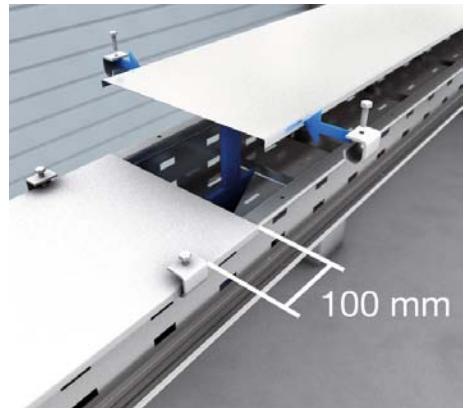

### 22 | Branch-piece

Attach branch-piece (WPRAA) and screw four times per side rail side.

### 23 | Branch-piece

Insert connecting tray with connection plate (VB) into extension branch-piece (WPRAA) and screw four times per side rail.

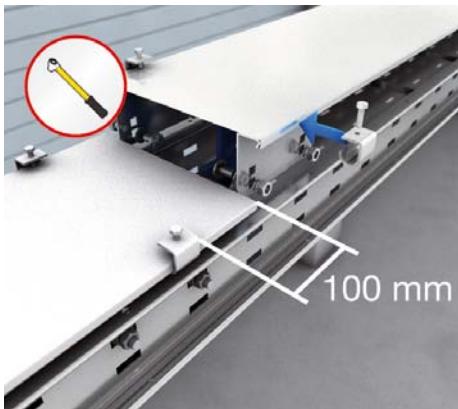

### 24 | Cover

Secure covers (WPD) with cover clamps (WPD-K) with a space of 100 mm from the cover ends and in the centres of the covers.

# Wide-span cable trays WPR

## Assembly instruction

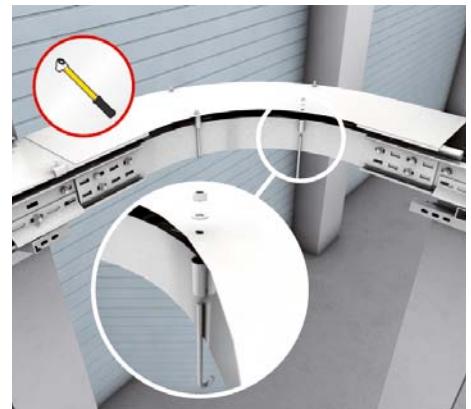

### 25 | Cover clamps

Secure elevated covers (WPD) with cover clamps (WPD-K and WPD-A) with a space of 100mm from the cover ends and in the centres of the covers.

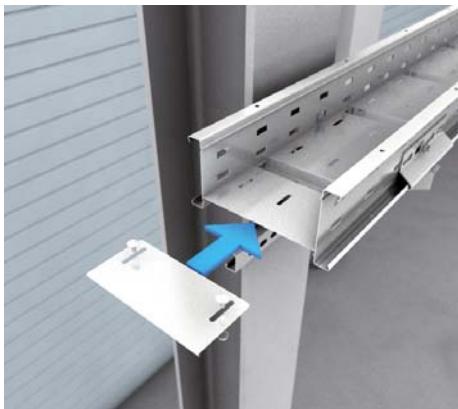

### 26 | Cover clamps

Screw covers onto the wide-span cable tray form parts (WPBD, WPAD or WPKD) with cover clamps (WPFDK) into all drill holes of the covers.

### 27 | Cover clamps

Screw elevated covers onto the wide-span cable tray form parts (WPBD, SPAD or WPKD) with cover clamps (WPFDKA) into all drill holes of the covers.

### 28 | Wide-span cable tray end plate

Push wide-span cable tray panel sheet (WPREB) up against tray bottom and screw tight.

### 29 | Barrier strip

Screw barrier strip (WPTR) three times (front, middle, back).

### 30 | Cutting and severing work

Cutting and severing work must be done with greatest care complying to all industrial safety regulations.

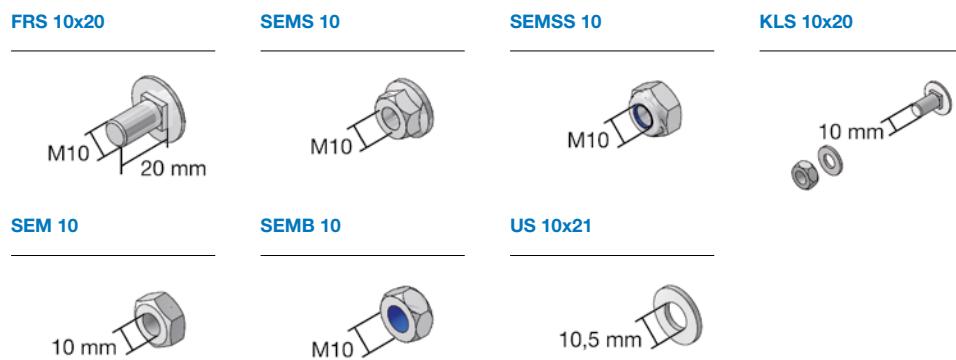

### 31 | Galvanize

All cutting and partition areas must be galvanised by customers with cold zinc paint (KZF) or cold zinc spray (KZS) after the deburring on site.

# Wide-span cable trays WPR

## Assembly instruction

Supporting structures must be assembled torsion-free! The assembly to ceiling profiles (one- or double-sided) is prohibited. Solely the assembly to (wall) brackets or pendant suspensions is allowed.

### 1 | Heavy wall bracket KIS

Heavy wall bracket (KIS) are to be clamped to steel support with side-rail support (WPHS-K) and clamping claws (SKS H).

### 2 | Heavy wall bracket KISS

Heavy wall bracket (KISS) are to be clamped to steel support with side-rail support (WPHS-A) and clamping claws (SKS M).

### 3 | Heavy wall bracket KWS

Heavy wall bracket (KWS) are to be plugged to concrete wall with bracket rail support (WPHS-A).

### 4 | Heavy wall bracket KWSS

Heavy wall bracket (KWSS) are to be plugged to concrete wall with bracket rail support (WPHS-A).

### 5 | Heavy corner installation EBW

Heavy corner installation (EBW) for horizontal 90-degree turnarounds with side rail support (WPHS-K) are to be plugged to concrete support.

L = width of wide-span cable tray + 560 mm

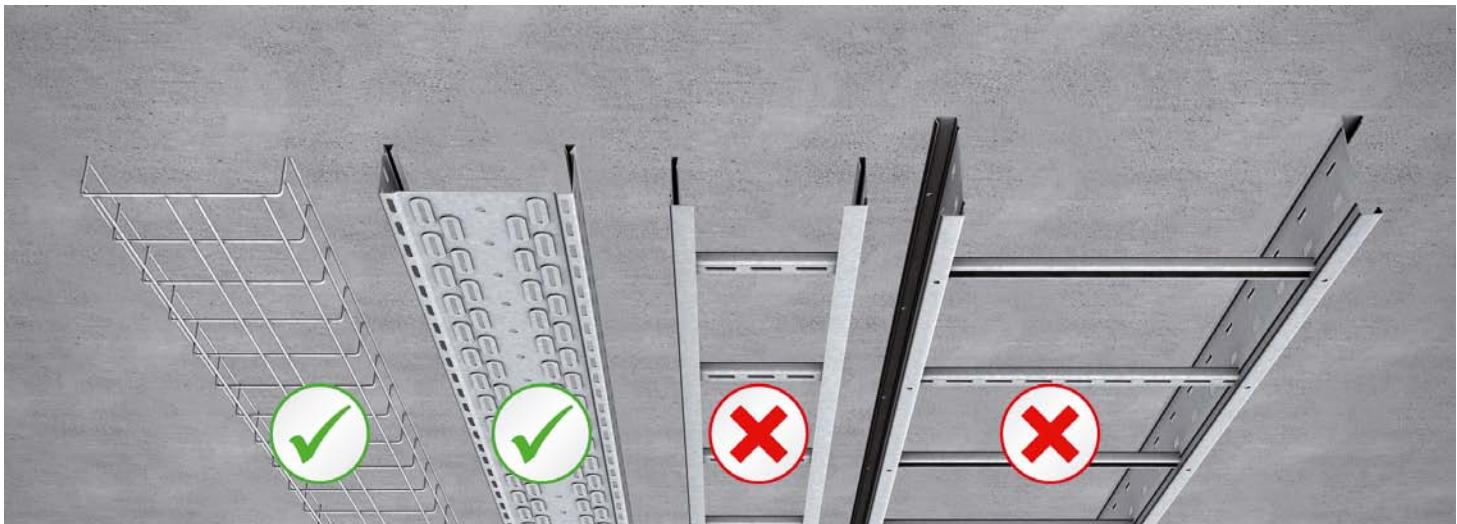

### 6 | Pendant suspension

Pendant suspension from profiles (e.g. KHU 60) with equaliser bar and side-rail support (WPHS-K) are to be plugged to concrete ceiling.

# Support systems | Light-duty

## Assembling instruction

Installation instruction for support systems of wire-mesh cable trays and cable trays attached directly to concrete.

### 1 | Wall mounting with bracket KWLL

To install the bracket KWLL use a dowel such as e.g. SD 8/30\*. Please make sure to use the small washer of the dowel between the anchor nut and the large washer US 8x25\*.

### 2 | Wall mounting with bracket KSLW

To install the bracket KSLW use a dowel such as e.g. SD 8/30\*. The spacer KSL-SP must be positioned before the dowel.

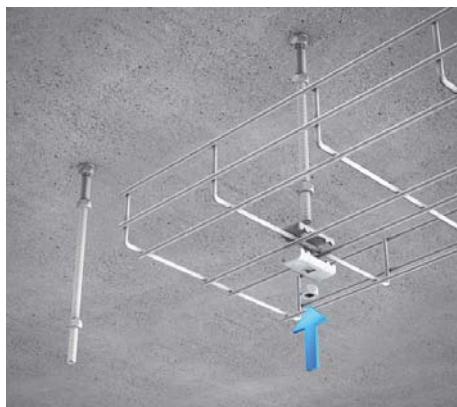

### 3 | Wall mounting with bracket KWF

To install the bracket KWF use a dowel such as e.g. SD 10/10\*.

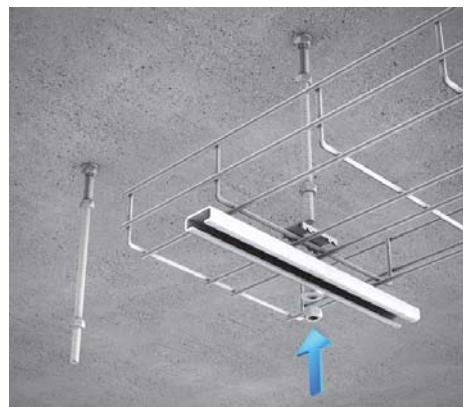

### 4 | Wall mounting with bracket KWW

To install the bracket KWW use a dowel such as e.g. SD 8/10\*. Please use the outer slots of the profile to fixate the bracket.

### 5 | Central suspension for wire-mesh cable tray of up to 100 mm width

Connect the central hanger GBAG 10 to the dowel using a hexagonal connector VM M8\*. Mount the connectors GV 30 with the wire-mesh cable tray inbetween.

### 6 | Central suspension for wire mesh cable tray of up to 300 mm width

Connect the central hanger GBAG 20/30 to the dowel using a hexagonal connector VM M8\*. Mount the connector GV 30 as well as the profile rails with the wire-mesh cable tray inbetween both.

\* The article is not included in the scope of delivery and must be ordered separately.

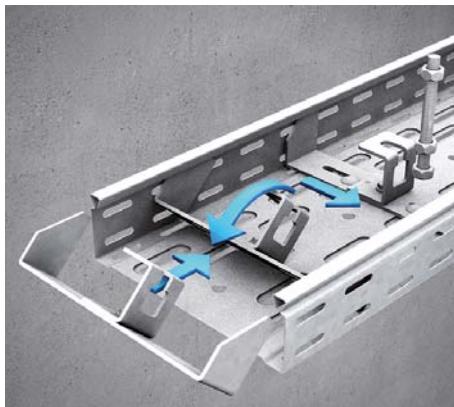

# Support systems | Light-duty

## Assembling instruction

**7 | Central suspension for cable trays of up to 300 mm width**

Connect the central hanger GBAR to the dowel using a hexagonal connector VM M10\*. Dismount the profile rails and remount together with the cable trays.

**8 | Central suspension for cable trays of up to 300 mm width**

Insert the central hanger MA into the cable tray in a tilted position and clip together by turning the MA. Insert the pre-mounted threaded rod GB M10\* sideways into the central hanger MA and secure using a hexagonal nut SEM 10\*.

**9 | Ceiling mounting with ceiling-fixed bracket DB**

To install the bracket DB use dowels such as e.g. SD 8/30\*. Please make sure to use the small washer of the dowel between the anchor nut and the large washer US 8x25\*.

**10 | Ceiling mounting with bracket support KDU 40**

To install the KDU 40 use two dowels such as e.g. SD 8/10\*. Secure the bracket KWF using KHUSS 40 support piece set. The protection cap SU 40\* is fitted to the bracket bottom, if needed.

**11 | Ceiling mounting with head plate BGU 40 and U-profile KHU 40**

To install the BGU 40 use two dowels such as e.g. SD 8/10\*. Mount the U-profile KHU 40 to the head plate BGU 40 using head screw set KLS 10x20\*. Secure the bracket KWF using KHUSS 40 support piece set. The protection cap SU 40\* is fitted to the bracket bottom, if needed.

**11 A | Ceiling mounting with bracket support KDU 40 at reduced load – without supporting piece**

**KHUSS 40**

To install the KDU 40 use two dowels such as e.g. SD 8/10\*. The bracket KWF is mounted with full thread hexagonal head screw 10x20\* and two washers US 10x21\* onto bracket support. The protection cap SU 40\* is fitted to the bracket bottom, if needed.

**12 | Ceiling mounting with bracket support KSLW**

To install the KSLW use dowels such as e.g. SD 8/30\*. The spacer KSL-SP must be positioned before the bracket support. Mount the bracket KSL using head screw FRS 8x20 and hexagonal nut SEMS 8.

**13 | Ceiling mounting with ceiling-fixed bracket KDAG 41**

To install the KDAG 41 use two dowels such as e.g. SD 8/10\*. Install the bracket KA 30 using full thread hexagonal head screw set SES 10x20\*, channel spring nut AMF22 M10\*. The protection cap SA\* is fitted to the bracket bottom, if needed.

**14 | Ceiling mounting with head plate BGA 41 and C-profile KHA 41**

To install the BGA 41 together with the KHA 41 use two dowels such as e.g. SD 8/10\*. Attach the C-profile to the KHA 41 by using head screw set KLS 10x20\*. Fasten the bracket KA using full thread hexagonal head screw set SES 10x20\* and channel nut spring AMF22 M10\*. The protection cap SA\* is fitted to the bracket bottom, if needed.

\* The article is not included in the scope of delivery and must be ordered separately.

# Support systems | Light-duty

## Assembling instruction

**15 | Ceiling mounting with trapezoid-sheet hanger  
TBS**

Fold out the trapezoid-sheet, then attach the hanger using full thread hexagonal head screw set SES 8x110 and hexagonal nuts SEM 8. Then it is possible to connect various types of accessories such as threaded rods or hexagonal nuts for mounting trays and other light-duty systems.

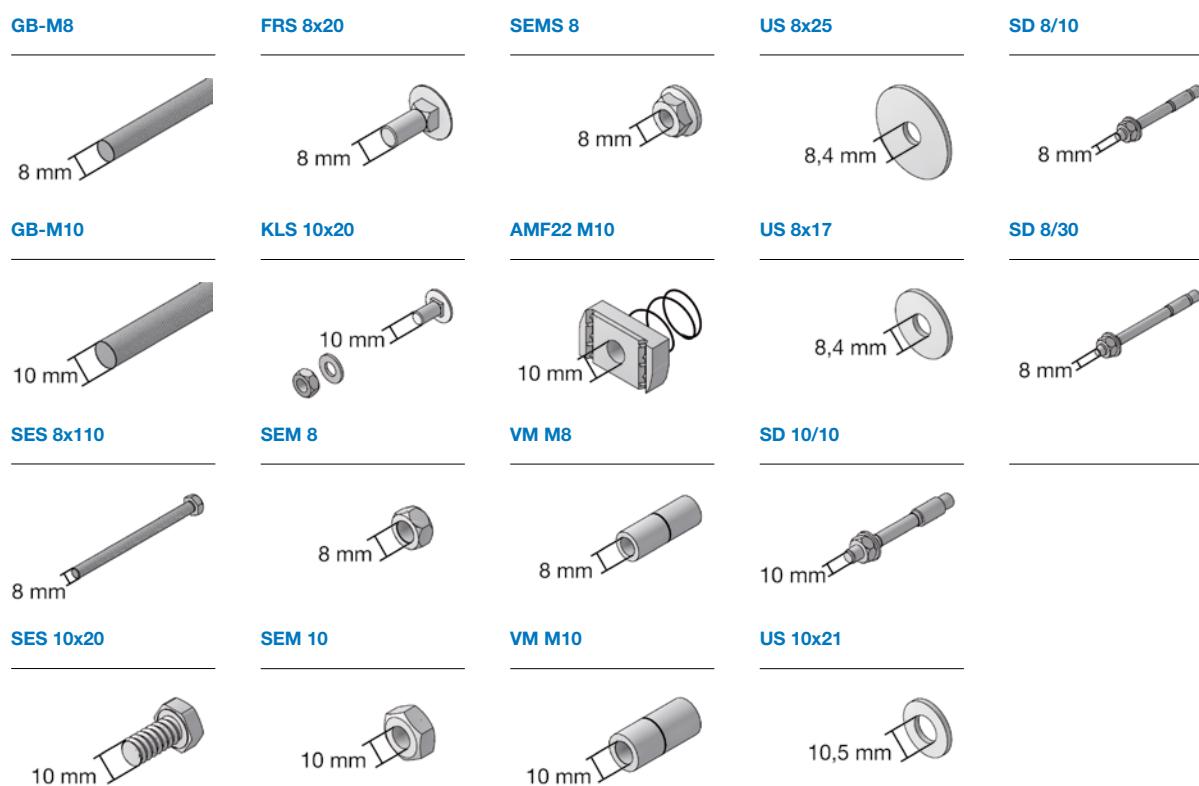

**16 | Ceiling suspension with pendulum suspension**

Connect threaded rods GB M8 to dowel using hexagonal connector VM M8, then mount C-profile KHA 8 onto the rods from the bottom.

## Assembling instruction

Installation instruction for support systems of wire-mesh cable trays, cable trays and cable ladders attached directly to concrete.

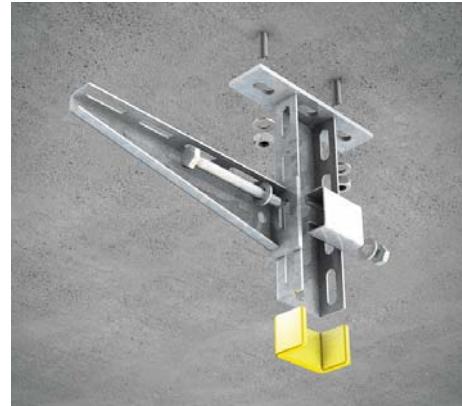

### 1 | Wall mounting with bracket KW

To install the bracket KW use dowels such as e.g. SD 10/10\*.

### 2 | Ceiling mounting with ceiling-fixed bracket DKSL

To install DKSL use dowels such as e.g. SD 8/30\*. The spacer KSL-SP must be positioned between the dowel and the bracket.

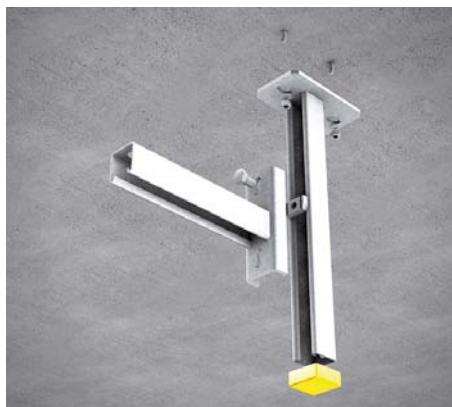

### 3 | Ceiling mounting with bracket support KDU 57

To install KDU 57 use two dowels such as e.g. SD 10/10\*. Secure the bracket KW using KHUSS 57 support piece set. The protection cap SU 57\* is fitted to the bracket bottom, if needed.

### 4 | Ceiling mounting with head plate BGU 57 and U-profile KHU 57

To install the BGU 57 use two dowels such as e.g. SD 10/10\*. Mount the U-profile KHU 57 to the head plate BGU 57 using head screw set KLS 10x20\*. Secure the bracket KW using KHUSS 57 support piece set. The protection cap SU 57\* is fitted to the bracket bottom, if needed.

### 5 | Ceiling mounting with ceiling-fixed bracket KDAG 41

To install KDAG 41 use two dowels such as e.g. SD 10/10\*. Then attach the bracket KA 41 using full thread hexagonal head screw set SES 10x20\* and channel spring nut AMF22 M10\*. The protection cap SU 57\* is fitted to the bracket bottom, if needed.

### 6 | Ceiling mounting with heavy bracket support KDU 60

To install KDU 60 use two dowels such as e.g. SD 10/10\*. Then attach the bracket KW using head screw set KLS 10x20\*. If the bracket is longer than 500 mm, screw the support piece KHUSS together with the bracket. The protection cap SU 60\* is fitted to the bracket bottom, if needed.

\* The article is not included in the scope of delivery and must be ordered separately.

# Support systems | Medium-duty

## Assembling instruction

**7 | Ceiling mounting with head plate BGU 60 and U-profile KHU 60**

To install BGU 60 use two dowels such as e.g. SD 10/10\*. Secure the U-profile with full thread hexagonal head screw set SES 10x20, hexagonal nut SEM 10 and washer US 10x21. Mounting the bracket KW is done as with KDU 60. The protective cap SU 60\* is fitted to the bracket bottom, if needed.

**8 | Ceiling mounting with heavy bracket support KDI**

To install KDI use two dowels such as e.g. SD 10/10\*. Fasten the bracket KT using the enclosed spacer. The protection cap SI\* is fitted to the bracket bottom, if needed.

**9 | Ceiling mounting with heavy bracket support KDI**

To install KDI use two dowels such as e.g. SD 10/10\*. Fasten the bracket KTS using the enclosed spacer. The protection cap SI\* is fitted to the bracket bottom, if needed.

**10 | Ceiling mounting with head plate BGI with I-profile KHI**

To install BGI use two dowels such as e.g. SD 10/10\*. Attach the I-profile using head screw FRS 10x30 and hexagonal nut SEM 10. Mounting KHI is done as with KDI. The protection cap SI\* is fitted to the bracket bottom, if needed.

**11 | Ceiling suspension with pendulum suspension**

Connect threaded rods GB M10 to dowel using hexagonal connector VM M10, then mount C-profile KHA 41 onto the rods from the bottom.

**12 | Ceiling suspension with pendulum suspension**

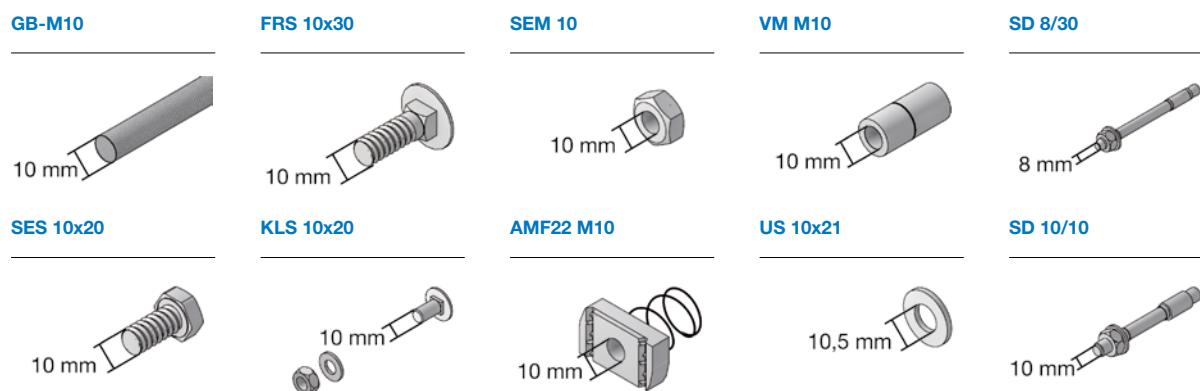

Connect threaded rods GB M10 to dowel using hexagonal connector VM M10, then mount U-profile KHU 57 onto the rods from the bottom.

\* The article is not included in the scope of delivery and must be ordered separately.

# Support systems | Heavy-duty

## Assembling instruction

Installation instruction for support systems of wire-mesh cable trays, cable trays, cable ladders and wide-span cable ladders attached directly to concrete.

### 1 | Wall mounting with heavy bracket KWS

To install KWS use dowels such as e.g. SD 12/10\*. Please make sure to use the top drill hole to fixate the bracket.

### 2 | Wall mounting with heavy bracket KWSS

To install KWSS use dowels such as e.g. SD 12/10\*. Please make sure to use the top and bottom drill holes to fixate the bracket.

### 3 | Mounting to steel beam using heavy bracket KIS

To install KIS use four beam clamps SKS H\*.

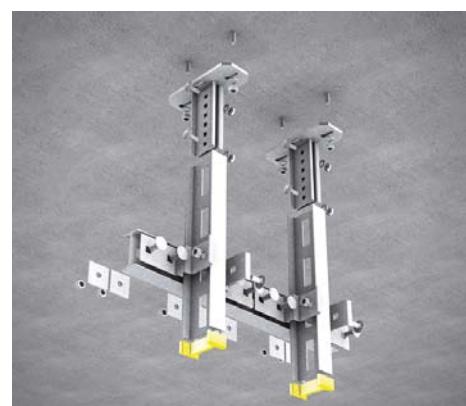

### 4 | Mounting to steel beam using heavy bracket KISS

To install KISS use four beam clamps SKS M\*.

### 5 | Ceiling suspension with pendulum suspension

Fasten head plates BGU 60 with two dowels each, e.g. SD 12/10\*. Secure the U-profile using the full thread hexagonal head screw set SES 10x20, hexagonal nut SEM 10 and washer US 10x21, both horizontally and vertically.

### 6 | Ceiling suspension with pendulum suspension

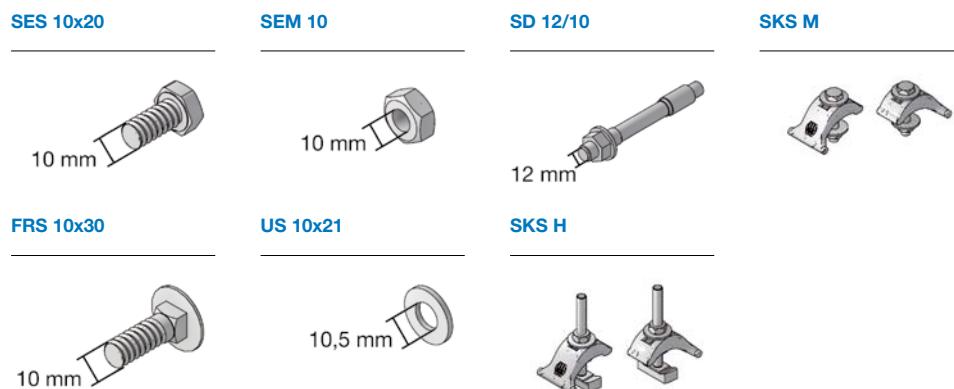

Fasten head plates BGI with two dowels each, e.g. SD 12/10\*. Secure the I-profiles horizontally to the head plates using head screw FRS 10x30 and hexagonal nut SEM 10. Screw the profile that is vertically to the support connector HKIQ.

\* The article is not included in the scope of delivery and must be ordered separately.

|   |  |
|---|--|
| A   | Cross section (useable) of cable tray  |
| a   | Wire distance  |
| B   | Width  |
| D   Ø   | Diameter   |
| d   | Thickness  |
| $F_D$   | dowel load   |
| G   | Weight per piece   |
| H   | Height   |
| $H_{\max}$  | Maximum height   |
| IK  | Internal hexagon   |
| k   | Clamping range   |
| L   | Length   |
| $L_{\min}$  | Minimum length   |
| $I_y$   | Torque of inertia around y-axis  |
| $I_z$   | Torque of inertia around z-axis  |
| M   | Torque   |
| I   | Capacity   |
| P   | Load   |
| $P_{\max}$  | Maximum permissible load   |
| $P_{zul}$   | Permissible load   |
| $Q_{LK}$  | Distributed load power cable   |
| $Q_{SK}$  | Distributed load control cable   |
| R   | Radius   |
| StA   | Distance between supports  |
| SW  | Wrench size  |
| t   | Material thickness   |
| T   | Depth  |
| $W_y$   | Resisting torque around y-axis   |
| $W_z$   | Resisting torque around z-axis   |
| <b>B</b>  | Steel, untreated and non-corrosive   |
| <b>E</b>  | Stainless steel, material no. 1.4301 (ANSI 304) (V2A)                            |
| <b>E4</b>   | Stainless steel, material no. 1.4571 (ANSI 316 Ti) / 1.4404 (ANSI 316 L)         |
| <b>EPDM</b>   | Ethylene-propylene-caoutchouc  |
| <b>F</b>  | Hot-dip galvanized, according to EN ISO 1461                                     |
| <b>GV</b>   | Fastenings galvanized, according to ISO 4042                                     |
| <b>M</b>  | Sand blasted and imprimed  |
| <b>PA</b>   | Polyamide  |
| <b>PE</b>   | Polyethylen  |
| <b>PVC</b>  | Polyvinyl chloride   |
| <b>S</b>  | Continuously hot galvanized (Sendzimir process)<br>(EN 10346) (10244-2 for wire) |
|  | Do not walk upon!  |
|  | TÜV approved   |
|  | Certified according to Germanischer Lloyd  |
